Tally Table

Part	Subject	Total Marks	Total Credits
I	Language (Tamil/ Hindi/ French/ Malayalam/ Sanskrit) (4)	400	12
II	English (4)	400	12
III	Core-Theory/Practical (16)	1600	60
	Elective (Major) (3)	300	15
	Allied (4)	400	20
IV	Basic Tamil/Adv.Tamil / Non Major Elective (2)	150	4
	Skill Based Subject (4)	400	12
	Environmental Studies (1)	50	2
	Value Education (1)	50	2
V	Extension Activity (1)	50	1
	Grand Total	3800	140

MAJOR ELECTIVE PAPERS

(3 papers are to be chosen from the following 6 papers)

1. Discrete Mathematics and Automata Theory
2. Operations Research
3. Numerical Methods
4. Linear Algebra
5. Business Application Software
6. Astronomy

NON-MAJOR ELECTIVE PAPERS

1. Human Rights
2. Women's Rights

Note

CBCS – Choice Based Credit System, CIA – Continuous Internal Assessment, ESE – End

Semester Examination, LAN – Language , CP – Core Paper,

AP A – Allied Paper A (First Allied), APB – Allied Paper B (Second Allied),

EVS – Environmental Studies, VED – Value Education, APr – Allied Practical, SBS – Skill Based

Subject, CPr – Core Practical, NMEP – Non Major Elective Paper, MEP – Major Elective Paper,

NCC – National Cadet Corps, NSS – National Service Scheme, PHE – Physical Education,

YRC – Youth Red Cross, EA – Extension Activity.

25% CIA is applicable to all subjects under Parts I, II, III and IV (Skill based subjects only)

(No CIA for other subjects in part IV), for Part V CIA only (No ESE).

Co curricular activities like NCC / NSS / Sports /YRC are conducted outside College hours.

UMA 1

SEMESTER I

2014 – 2015 onwards
Total Credits = 4

12UMA101
Total Hours = 60

CORE PAPER 1 CLASSICAL ALGEBRA

Objectives:

Being the first paper, at the end of this course, students are expected to come out with the knowledge of convergence and divergence of series, specified tests and theory of equations.

UNIT I

Convergency and Divergency of series: **Definitions – Elementary results*** –Some general theorems connecting infinite series – Series of positive terms - - Comparison tests - De Alembert's ratio test - Raabe's test. 12hrs

UNIT II

Cauchy's condensation test- Cauchy's root tests. - Absolute Convergent series . 12hrs

UNIT III

Binomial, Exponential and Logarithmic series theorems. Their application to Summation only. 12hrs

UNIT IV

Theory of equations: **Roots of an equation*** – Relations between the roots and coefficients- Symmetric function of the roots -Transformations of equations –Character and position of roots – Reciprocal equation. 12hrs

UNIT V

Descarte's rule of signs - Rolle's theorem - Multiple roots – Nature of the roots of $f(x) = 0$ - Horner's method. 12hrs

UMA 2

Text Book

T. Natarajan and others, Algebra, S.Viswanathan (Printers & Publishers) Pvt. Ltd, Chennai, 1997.

References

1. P.N.Chatterji, Algebra, Rajhans Prakasham Mandir, Meerut (U.P), 1994.
2. M.L.Khanna, Algebra, Jai Prakash Nath & Co, Meerut (U.P), 1991.
3. A.R.Vasishtha and R.K.Gupta, Krishna Prakasham Mandir, Meerut (U.P), 1990-91.

*** Self Study (Questions may be asked from these portions also)**

UMA 3

SEMESTER I

2014 – 2015 onwards

Total Credits = 4

12UMA102

Total Hours = 75

CORE PAPER 2 CALCULUS

Objectives:

Students are exposed to learn different methods of integration, multiple integrals and Beta, Gamma integrals which form the basis for higher studies.

UNIT I

Curvature –Radius of curvature in Cartesian and Polar forms –Evolutes and Envelopes - Pedal equations –**Total differentiation*** –Euler's theorem on homogeneous functions. 15hrs

UNIT II

Integration of $f'(x)/f(x)$, $f(x)f'(x)$, $(px + q) / \sqrt{ax^2 + bx + c}$, $\sqrt{(x-\alpha) / (\beta-x)}$, $\sqrt{(x-\alpha) (\beta-x)}$, $1/ \sqrt{(x-\alpha) / (\beta-x)}$, $1/(a \cos x + b \sin x + c)$, $1/ (a \cos^2 x + b \sin^2 x + c)$ - **Definite integrals***- Integration by parts – Reduction formulae. 15hrs

UNIT III

Double integrals – Evaluation - Change of order of integration in double Integral –Applications to calculate areas – Areas in polar coordinates. 15hrs

UNIT IV

Triple integrals – Evaluation – Jacobian - Change of variables in double and triple integrals using Jacobian – Volume as a triple integrals. 15hrs

UMA 4

UNIT V

Notion of improper integrals and their convergence - Simple tests for convergence, Simple problems. Beta and Gamma functions - Properties - Relation between them – Applications of Gamma functions to multiple integrals. 15hrs

Text Books

1. S. Narayanan and T.K.M.Pillai, Calculus Vol. I (Differential Calculus), S.Viswanathan (Printers and Publishers) Pvt. Ltd, Chennai, 1999. (For Unit I)
2. S. Narayanan and T.K.M.Pillai, Calculus Vol. II (Integral Calculus) S.Viswanathan (Printers and Publishers) Pvt. Ltd, Chennai, 1997. (For Units II, III, IV and V).

2. A.R.Vasishtha and S.K.Sharma, Integral Calculus , Krishna Prakashan Mandir, Meerut, 1990.
3. Shanthi Narayan, Differential Calculus, Shyam Lal Charitable Trust, New Delhi, 1993.

*** Self Study (Questions may be asked from these portions also)**

UMA 5
SEMESTER I

2014 – 2015 onwards

Total Credits = 5

14UMA1I1
Total Hours =105

ALLIED PAPER A1 STATISTICS I

Objectives:

To enable the students to acquire the knowledge of statistics.

UNIT I

Probability : Introduction – Classical Definition – Additional Theorem – Multiplication Theorem – Odds in favour and odds against an Event* – Axiomatic Approach – **Axioms of Probability** – Conditional Probability – Multiplicative Law of Probability – Probability of an event in terms of conditional Probability - Baye's Theorem.

Random Variables: Definition – Discrete Random Variable – Continuous Random Variable – Cumulative Distribution – Properties of Distribution Function – Function of a Random Variable- Two Dimensional Random Variable – Definitions – Marginal Probability Distribution- Conditional Probability Distribution – Independent Random Variable.

21hrs

UNIT II

Mathematical Expectations: Expectation or Mean Value – Definition - Functions of a Random Variable – Definition – Theorem - Properties of Expected Values – Theorems . Variance : Variability or Dispersion – **Range** – Mean Deviation – Definition – Formula for Variance of X – Theorems - Tchebechev's Inequality

Moments and Moment Generating Function: Definition – Central moments in terms of moments about Origin- Moment Generating Function – Definition – Properties of Moment Generating Function – Theorems

21hrs

UNIT III

Correlation: Definition – Theorems - Sample Correlation – Positive Correlation – Negative Correlation – No Correlation – Simple Correlation – Scatter Diagram – Numerical Value of the Correlation Coefficient – Rank Correlation – Properties of Correlation Coefficient - Limitations – Method of Calculating Correlation Coefficient- Merits and Demerits

Regression: Introduction – Derivation of Regression lines-Properties of Regression Coefficient

21hrs

UMA 6

UNIT IV

Binomial Distribution: Binomial Frequency Distribution- Examples- Moments of Binomial Distribution- Recurrence formula for moments- Moment Generating function- **Additive property of Binomial Random Variable.**

Poisson Distribution: Examples- Poisson Distribution- Definition- Moments of the Poisson Distribution- Expected Value- Variance- Recurrence Formula for moments- Moment Generating function.

21hrs

UNIT V

Normal Distribution : Definition – Standard Normal Probability - Distribution – Moments- Moment Generating Function- Moments about Mean – Linearity Property – Absolute Mean Deviation – Mode – Points of Inflexion – Normal Probability Integral – **Properties of Normal Distribution*.**

21hrs

Text Book

Dr.P.R.Vittal, Mathematical Statistics, Margham Publications, Chennai, 2002.

Unit I	Chapter 1	Pages 1.1 to 1.10, 1.32 to 1.47
	Chapter 2	Pages 2.1 to 2.13, 2.17 to 2.32
Unit II	Chapters 3	Pages 3.1 to 3.17
	Chapters 4	Pages 4.1 to 4.19 , 4.21 to 4.22
Unit III	Chapters 8	Pages 8.1 to 8.14, 8.16 to 8.47
	Chapters 9	Pages 9.1 to 9.24
Unit IV	Chapters 12	Pages 12.1. to 12.23
	Chapters 13	Pages 13.1. to 13.20
Unit V	Chapter 16	Pages 16.1 to 16.27

* Self Study (Questions may be asked from these portions also)

UMA 7

SEMESTER I

2014 – 2015 onwards

Total Credits = 2

12EVS101

Total Hours = 30

PART IV - ENVIRONMENTAL STUDIES

Objectives:

To enable the students to understand the concept of Ecosystems, Biodiversity and its conservation, Social issues, Scope and importance of environment.

UNIT I MULTIDISCIPLINARY NATURE OF ENVIRONMENT

1.1 Definition; **scope and importance***

1.2 Need for public awareness

1.3 Natural resources

1.3.1 Types of resources

Forest Resources – Water Resources – Mineral Resources – Food Resources –

Energy Resources – Land Resources.

UNIT II ECOSYSTEMS

2.1 Concept of an ecosystem*

2.2 Structure and functions of an ecosystem

2.3 Producers, consumers and decomposers

2.4 Energy flow in the ecosystem

2.5 Ecological succession

2.6 Food chains, food web and ecological pyramids

2.7 Structure and function of the following ecosystem.

Forest Ecosystem – Grassland Ecosystem – Desert Ecosystem – Aquatic Ecosystem .

UNIT III BIODIVERSITY AND ITS CONSERVATION

3.1 Introduction – Definition – Genetic – Species and ecosystem diversity

3.2 Biogeographical classification of India

3.3 Value of biodiversity

3.4 Biodiversity at global, national and local levels

3.5 India as a mega – diversity Nation

3.6 Hot spot of biodiversity

3.7 Threats to biodiversity

3.8 Endangered and endemic species of India

3.9 Conservation of Biodiversity

insitu Conservation of Biodiversity – *exsitu* Conservation of Biodiversity

UNIT IV ENVIRONMENTAL POLLUTION

- 4.1 Definition
- 4.2 Causes, effects and control measures of : Air Pollution – Water Pollution – Soil Pollution – Marine Pollution- Noise Pollution – Thermal Pollution – Nuclear Pollution.
- 4.3 Solid Waste Managements : causes , effects , control measures of urban and industrial wastes.
- 4.4 Role of individual in prevention of pollution
- 4.5 Pollution case studies – domestic waste water, effluent from paper mill and dyeing , cement pollution.
- 4.6 Disaster Management – Flood, Drought , Earthquake, Tsunami, Cyclone and Landslide.

UNIT V SOCIAL ISSUES AND THE ENVIRONMENT

- 5.1 Sustainable Development
- 5.2 Urban problems related to energy
- 5.3 Water Conservation : Rain Water Harvesting and Watershed Management
- 5.4 Resettlement and rehabilitation of people, its problems and concerns, case studies- Narmatha Valley Project.
- 5.5 Environmental ethics, issues and possible solutions.
- 5.6 Climatic change, global warming, ozone layer depletion, acid rain, nuclear accidents and holocaust, case studies – Hiroshima and Nagasaki, Cheropyl.
- 5.7 Consumerism and waste products
- 5.8 Environmental Protection Act
- 5.9 Air Pollution Act (Prevention and Control)
- 5.10 Water Pollution Act (Prevention and Control)
- 5.11 Wild Life Protection Act
- 5.12 Forest Conservation Act
- 5.13 Issues involved in enforcement of environmental legislation
- 5.14 Public awareness.
- 5.15 Human population and the environment.

UMA 9

- 5.15.1 Population Growth and Distribution
- 5.15.2 Population Explosion – Family Welfare Programme
- 5.15.3 Environmental and Human Health
- 5.15.4 Human Rights
- 5.15.5 Value Education
- 5.15.6 HIV / AIDS
- 5.15.7 Women and Child Welfare
- 5.15.8. Role of Information Technology in Environment and Human Health.

*** Self Study (Questions may be asked from these portions also)**

2014 – 2015 onwards

12UMA203

Total Credits = 4

Total Hours = 60

CORE PAPER 3 DIFFERENTIAL EQUATIONS AND LAPLACE TRANSFORMS**Objectives:**

To get the ability of solving second order and first order ordinary differential equations, first order partial differential equations. Also to get the knowledge about Laplace transforms

UNIT I

P. I. of equations of second order with constant co-efficients for $X.e^{mx}$ - Higher order equations when $f(D)$ is easily factorizable - Linear equations with variable co-efficients (reducible to Quadratic form). 12hrs

UNIT II

ODE –First order higher degree equations – Solvable for x , y , p – Clairaut's form – Simultaneous differential equations.

$$(i) \quad \begin{aligned} f_1(D)x + f_2(D)y &= F_1(t) \\ g_1(D)x + g_2(D)y &= F_2(t) \end{aligned}$$

where f_1 , f_2 , g_1 and g_2 are rational functions of $D=d/dt$ with constant coefficients, F_1 and F_2 are explicit functions of t .

$$(ii) \quad dx/P = dy/Q = dz/R$$

conditions of integrability.

12hrs

UNIT III

PDE – **Formation of equations - eliminating arbitrary constants and arbitrary functions*** – Definition of general, particular and complete solutions – Singular and general solutions of first order equations in the standard form

UMA 11

(iii) $f(p, q)=0$

(iv) $F(z, p, q)=0, F(x, p, q)=0, F(y, p, q)=0, F_1(x, p)=F_2(y, q), z = p(x) + q(y) + f(p, q)$

Lagrange's method of solving the linear partial differential equation $Pp + Qq = R$.

12hrs

UNIT IV

Laplace transform: **Definition –Transforms of e^{at} , $\cos at$, $\sin at$ and t^n where n is an integer.**
First shifting theorem – Laplace transforms of $e^{at} \sin bt$, $e^{at} \cos bt$, and $e^{at} t^n$. Theorems of $L\{f'(t)\}$, $L\{f''(t)\}$.

12hrs

UNIT V

Inverse Laplace transformation – Application of Laplace transform to solution of differential equations with constant coefficients .

12hrs

Text Book

S.Narayanan and T.K.M.Pillai, Calculus, S.Viswanathan (Printers and Publishers) Pvt. Ltd, Chennai, 1996.

Unit I	Chapter VII	Sections 3 and 4
Unit II	Chapter VIII	Sections 5.1 to 5.4 and 6.1
	Chapter X	Sections 2 and 3
Unit III	Chapter XI	Sections 1 to 3
		Sections 5.1 to 5.4
Unit IV	Chapter IX	Sections 1, 2 and 4
Unit V	Chapter XII	Section 4
	Chapter IX	Sections 6 to 8

UMA 12

UMA 13

SEMESTER II

2014 – 2015 onwards

Total Credits = 4

12UMA204

Total Hours = 75

CORE PAPER 4 **TRIGONOMETRY, VECTOR CALCULUS AND FOURIER SERIES**

Objectives:

To enable the students to learn about the expansion of trigonometric functions, line integral, surface integral, volume integral and Fourier series.

UNIT I

Expansions of $\cos n\phi$, $\sin n\phi$, $\cos^n \phi$, $\sin^n \phi$ - Hyperbolic functions – Separation of real and imaginary parts of $\sin(\alpha + i\beta)$, $\cos(\alpha + i\beta)$, $\tan(\alpha + i\beta)$, $\sinh(\alpha + i\beta)$, $\cosh(\alpha + i\beta)$, $\tanh(\alpha + i\beta)$, $\tan^{-1}(\alpha + i\beta)$, Logarithm of a complex number. 15hrs

UNIT II

Gradient of a scalar point function and Divergence and curl of a vector point function. 15hrs

UNIT III

Integration of vectors point functions - Integral theorems – Gauss divergence theorem – Examples. 15hrs

UNIT IV

Green and Stokes theorems - Examples. 15hrs

UNIT V

Fourier series – Definition. Finding Fourier co-efficients for a given periodic function with period 2π - odd and even functions – **Half range series with period π** . 15hrs

UMA 15

SEMESTER II

2014 – 2015 onwards
Total Credits = 5

14UMA2I2
Total Hours = 105

ALLIED PAPER A2 STATISTICS II

Objectives:

On successful completion of the course the students should have understood the applications and nature of the probability distributions such as normal, t, χ^2 and F. To enable the students to give inference on statistical population based on sample statistics.

UNIT I

Sampling Distribution – Sampling Distribution of \bar{X} - The Sampling Distribution of \bar{X} when X_1, X_2, \dots, X_n are Independent and Normally Distribution - Chi Square Distribution – MGF of χ^2 Distribution - β, γ Coefficients – Characteristic Function of χ^2 - Mode of χ^2 Distribution – Additive Property of χ^2 Random Variable – Relation between Moments – Student t Distribution – Moments of t Distribution – Even Moments - β, γ Coefficients – Recurrence Formula for Moments – Limiting form of t – Distribution – Properties – F Distribution – Deduction – Derivation of the Distribution of $Z = \frac{1}{2} \log_e F$ – Moments of F - Distribution - Recurrent Relation between Moments. 21hrs

UNIT II

Point Estimation- Estimator and Estimate-Unbiased estimator – Definition - Theorem - Examples-Efficiency- Cramer Rao Inequality - Rao Blackwell Theorem-Most efficient estimator - Examples - Consistent estimator- Examples –Invariance Property of consistent estimator-Sufficient estimator- Theorem - Method of maximum Likelihood estimator – Examples - Properties of maximum Likelihood estimator -Examples 21hrs

UNIT III

Large Samples : **Population – Sample - Parameter and statistic***– Sampling Distribution – Sampling Distribution - Sampling Distribution of Mean – Characteristics of Sampling Distribution – Interpretation of Standard Error of the Mean – Central Limit Theorem – Finite Population – Test of Hypothesis – Significance Level – One Tail Test – Two Tail Test – Procedure for Test of Hypothesis - Procedure for Two Tail Test - Procedure for one Tail Test – Test for Equality of Two Means – Test for Specified Proportion - Test for Equality of two Proportions. 21hrs

UNIT IV

Small Samples – t Test : Introduction – Uses of t test - Properties of Sampling Distribution of t - Test for a specified Mean – Test of Significance for the Difference between Two Population Means when Population Standard Deviations are not known. Small Samples – Chi Square Test : Additive Property - Pearson's Statistic – Uses of χ^2 Test – Procedure for testing the Significance of the Difference between the Observed and Expected Frequencies – Test of Independence of Attributes – Test for a Specified Population Variance - Test of Independence of Attributes.

21hrs

UNIT V

Small Samples- F Test : Procedure for Test of Equality of Two Population Variance – Analysis of Variance - One - Way Classification – ANOVA table – Two – Way Classification . Design of Experiments : Introduction – Experimental Units – Basic Principles in the Design of Experiments – Complete Block Designs – Completely Randomized Design – Randomized Block Design – Latin Square Design – Analysis of Latin Square Design – Merits and Demerits of Completely Randomised Design – Merits and Demerits of Random Block Design and Latin Square Design.

21hrs

Text Book

Dr.P.R.Vittal, Mathematical Statistics, Margham Publications, Chennai, 2002.

Unit I	Chapter 22	Pages	22.1 to 22.41
Unit II	Chapter 23	Pages	23.1 to 23.56
Unit III	Chapter 24	Pages	24.1 to 24.15 , 24.18 to 24.24 24.28 to 24.33, 24.36 to 24.40
Unit IV	Chapter 25	Pages	25.1 to 25.12, 25.15 to 25.30
	Chapter 27	Pages	27.1 to 27.15, 27.19 to 27.35
Unit V	Chapter 26	Pages	26.1 to 26.12, 26.15 to 26.27
	Chapter 28	Pages	28.1 to 28.17

SEMESTER – II
PART IV VALUE EDUCATION – MORAL AND ETHICS
(2014 – 2015 Batch Onwards)

Total Credits: 2

Total hours: 30

UNIT I

Introduction to Moral and Ethics; Aim of Education (6 Hours)

UNIT II

Ethics and Culture (6 Hours)

UNIT III

Early Life of Swami Vivekananda (6 Hours)

UNIT IV

The Parliament of Religions (6 Hours)

UNIT V

Teachings of Swami Vivekananda (6 Hours)

Text Book:

Value Based Education - Kongunadu Arts and Science College, Coimbatore,
First Edition, 2014.

References :

1. **Moral and Ethics** - Published by Dr.M.Aruchami, Secretary and Director, Kongunadu Arts and Science College, Coimbatore, First Edition, June 2007.
2. **“Vivekananda A Biography”** - Swami Nikilananda, 29th Reprint, January 2013, Published by Swami Bodhasarananda, Adhyaksha, Advaita Ashrama, Mayavati, Champawat, Uttarakhand, Himalayas.

Question Paper Pattern

(External only)

Duration: 3 hours

Total Marks: 50

Answer all Questions (5 x 10 = 50 Marks)

Essay type, either or type questions from each unit.

UMA 18
SEMESTER III

2014– 2015 onwards
Total Credits = 4

12UMA305
Total Hours = 60

CORE PAPER 5 ANALYTICAL GEOMETRY

Objectives:

To understand the surfaces in two dimensional and three dimensional co-ordinate system.

UNIT I

Analytical geometry of two dimensions: **Polar equation of a conic*** –directrix –Chord –Tangent –Normal.

10hrs

UNIT II

Analytical geometry of three dimensions: - Straight lines - Co-planarity of Straight lines –Shortest distance (S.D) and Equations of S.D between two lines.

16hrs

UNIT III

Sphere: - **Standard equation of a sphere*** – results based on the properties of a sphere –Tangent plane to a Sphere –Equations of a circle.

12hrs

UNIT IV

Cone and Cylinder: Cone whose vertex is at the origin-enveloping cone of a sphere – right circular Cone – equation of a cylinder – right circular cylinder.

12hrs

UNIT V

Conicoids: - Nature of conicoid –Standard equation of a central conicoids –Enveloping cone – Tangent Plane –conditions for tangency –Director sphere and director plane.

10hrs

UMA19

UMA 20

SEMESTER III

2014 – 2015 onwards

Total Credits = 4

12UMA306

Total Hours = 45

CORE PAPER 6 STATICS

Objectives:

To enable the students to realize the concept about the forces, resultant force of more than one force acting on a surface, friction and centre of gravity.

UNIT-I

Forces acting at a point: **Resultant and Component*** - Parallelogram of Forces – Analytical expressions – Triangle of Forces – Perpendicular triangle of forces and its converse – Polygon of forces – Lami's theorem – (λ - μ) theorem – Resolution and components of forces – Theorem on resolved parts, Resultant of any number of forces (Analytical and graphical methods) – Condition of any number of forces acting upon a particle. 9hrs

UNIT II

Parallel forces, moments: Resultant of two like and unlike parallel forces – condition of equilibrium of three coplanar parallel forces – Centre of two parallel forces – moment of a force – geometrical representation – Varignon's theorem – generalized theorems – moment of force about an axis – Couples: Definition – Equilibrium of two couples – Equivalence of two couples – Couples in parallel planes – Resultant of coplanar couples – Resultant of a couple and a force. 9hrs

UNIT III

Three forces acting on a rigid body: Rigid body subjected to any three forces – Three coplanar forces – Two triangle theorems (statements only) – Coplanar forces: Reduction of any number of coplanar forces – Analytical representation – Conditions for a system of forces to reduce to a single force. 9hrs

UNIT IV

Introduction – **Statical, Dynamical and limiting friction*** – Friction – Coefficient of friction – Angle of friction – Cone of friction – Equilibrium of a particle on a rough inclined plane. 9hrs

UMA 21

UNIT V

Equilibrium of Strings: Definition – Equation of common catenary – Tension at any point.

9hrs

Text Book

M.K.Venkataraman, Statics, Agasthiar Publications, Trichy, 1999.

Unit I	Chapter 2	Sections 1, 3 to 16
Unit II	Chapter 3	Sections 2, 3, 5, 7, 9, 12, 13
	Chapter 4	Sections 1 to 4, 6 and 7
Unit III	Chapter 5	Sections 1, 2 and 5
	Chapter 6	Sections 2 to 7
Unit IV	Chapter 7	Sections 3, 5 to 8, 10
Unit V	Chapter 9	Sections 1, 2 and 4

UMA 22

SEMESTER III

Part IV –Skill Based Subject 1

GENERAL AWARENESS (ONLINE)

(2014 – 2015 Batch Onwards)

14UGA3S1

Total Hours : 30

Total Credits: 3

Objectives:

- **To acquire knowledge in relation to various competitive examinations.**
- **To create awareness about an online examination which is being followed in competitive examinations.**

UNIT I (6 hours)

1. Tamil and other Literatures

Tamil, English, Christian and Muslim Literatures – Ancient Literature – Bakthi Literature – Epics – Medieval Literature – Modern Literature (Novel, Dramas, Short Stories, Modern Poetry).

2. Economics and Commerce

Basic Economics – Auditing – Management – Capital Market – Foreign Trade – Companies – Banking.

3. Social studies

Indian History – Inventions – Indian Poetry – Constitution – Judiciary – Languages – Literacy – Indian Geography – Lithosphere – Climate – Soil – Agriculture – Population.

UNIT II (6 hours)

4. Numerical Aptitude

Objective Arithmetic : Number systems – probability – HCF and LCM of numbers - decimal fractions – simplification – squareroots and cuberoots – average – percentage – profit and loss – ratio and proportion – time and work – simple interest – area, volume and surface area.

5. Verbal Aptitude

Spot the odd one out – correct form of verb – preposition – find out the rightly spelt word – choose the correct meaning of idioms – synonyms and antonyms.

6. Abstract Reasoning

Logic Reasoning : Logic – statement – arguments – statement assumptions – Statement course of action – theme detection – deriving conclusion from passages.

Non – verbal Reasoning : Series – analogy – classification – analytical reasoning – mirror images – water images – paper folding – paper cutting – rule detection – grouping of identical figures.

UNIT III (6 hours)

7. General Science and Technology

SCIENCE - Basic principles and concepts in Physics, Chemistry, Botany and Zoology.

TECHNOLOGY - Metallurgy, instrumentation, discoveries and inventions of techniques.

8. Computer Science

Historical evolution of computers – Computer applications – Data processing concepts – Computer codes and arithmetic – Hardware components – Data Structures.

9. Education

Development process of the learner – Principles of development (physical, social, emotional and intellectual) – Learning process – Teaching and teacher behaviour – Interaction analysis – Microteaching – Teacher as a leader – Motivation – Personality dimension – concept of mental health – Counselling.

UNIT IV (6 hours)

10. Library and Information Science

Library and Information Science – Basics, Computer, Library Network and others like Research, Reprography etc.

11. Sports and Games

Athletics – Track Events – Field Events – Games – Indoor Games – Outdoor Games – General knowledge – Sport and Olympics – First Aid.

12. Current Affairs

State, Central and International affairs: Budgets – Politics – Sports – Education – Commerce and Industry – Inventions – Science and Technology – Currency – Agriculture – Movies – Guinness records – Awards – IT Industry – Space Research – Defence etc.

UNIT V (6 hours)

13. National Cadet Corps (NCC)

Introduction to the Armed Forces (Army, Navy, Air Force) – Drill – Weapon Training – Map Reading – Civil Defence.

14. National Service Scheme (NSS)

History of NSS – History of Motto, Symbol, Badge – Aims and Objectives – Duties and Total Hours – Organisational and Administrative setup – History of voluntary organization – Regular activities – Special camp activities – Special programmes – awards – Important days.

15. Youth Red Cross (YRC)

History of International Red Cross – History of Indian Red Cross – History of Youth Red Cross – Main objectives of YRC – Emblem – Fundamental principles of Red Cross – Organizational Setup – Activities of Youth Red Cross – Role of different functionaries – Training programmes for YRC Program Officers – Training programme for YRC Volunteers – YRC Song – Working Hours – General orientation – Special orientation – Program skill learning.

Text Book

1. General Awareness, Question Bank, Kongunadu Arts and Science College, Coimbatore, First Edition 2014.

Question Paper Pattern

Max. Marks 100

End of Semester Examination (ESE)- On-Line Examination

75 Marks

1. 150 questions are to be given. Each question carries ½ mark.
2. In each unit, 30 questions are to be given, covering all the 5 units.

Continuous Internal Assessment (CIA) (through On-Line)

25 Marks

- | | |
|-----------------|----------|
| a) Two Exams. | 15 Marks |
| b) Assignment** | 5 Marks |
| c) Attendance | 5 Marks |

** Each student has to submit an assignment in the Current Affairs area.

UMA 25

SEMESTER IV

2014 – 2015 onwards

Total Credits = 4

12UMA407

Total Hours = 45

CORE PAPER 7 GRAPH THEORY

Objectives:

This course focuses on the Graphs, Sub Graphs, Trees, Cut sets, Directed graphs. It also deals about matrix representation of Graphs

UNIT I

Introduction : Application of graphs – **Finite and infinite graphs*** – incidence and degree – isolated vertex, pendant vertex and null graph.

Paths and Circuits – isomorphism – subgraphs – walks, paths and circuits – connected graphs, disconnected graphs and components – Euler graphs – operations on graphs – more on Euler graphs – Hamiltonian paths and circuits – the travelling salesman problem. 9hrs

UNIT II

Trees and fundamental circuits : **Trees – some properties of trees*** – pendant vertices in a tree – distance and centres in a tree – rooted and binary trees – on counting trees – spanning trees – fundamental circuits. 9hrs

UNIT III

Cut sets and Cut vertices : cut sets – some properties of a cut set – all cut sets in a graph – fundamental circuits and cut sets – connectivity and separability – network flows – 1 – isomorphism – 2- isomorphism. 9hrs

UNIT IV

Matrix representation of graphs : incidence matrix – submatrices of $A(G)$ – circuit matrix – fundamental circuit matrix and rank of B – an application to a switching network – cut -set matrix - relationships among A_f , B_f and C_f – path matrix – adjacency matrix. 9hrs

UNIT V

Directed graphs : some types of digraphs – digraphs and binary relations – directed paths and connectedness – fundamental circuits in digraphs – matrices A , B and C of digraphs – adjacency matrix of a digraph. 9hrs

Text Book

Narsingh Deo, Graph Theory with Applications to Engineering and Computer Science, Prentice Hall of India (P) Ltd, New Delhi, 1997.

UMA 26

Unit I	Chapter 1	Sections 1.1 to 1.5
	Chapter 2	Sections 2.1 to 2.2, 2.4 to 2.10
Unit II	Chapter 3	Sections 3.1 to 3.8
Unit III	Chapter 4	Sections 4.1 to 4.8
Unit IV	Chapter 7	Sections 7.1 to 7.9
Unit V	Chapter 9	Sections 9.1 to 9.4, 9.7 to 9.9.

*** Self Study (Questions may be asked from these portions also)**

UMA 27

SEMESTER IV

2014 – 2015 onwards

Total Credits = 4

12UMA408

Total Hours = 60

CORE PAPER 8 DYNAMICS

Objectives:

To enable the students to apply laws, principles and understands the reason for dynamic changes in the body. It provides the knowledge about the field kinematics, projectile, simple harmonic motion and impact of a particle on a surface.

UNIT I

Motion in a straight line: Equations of motion* - acceleration of falling bodies -vertical motion under gravity –motion down a smooth inclined plane.

Laws of motion:* Newton's laws of motion. Newton's law of gravitation – conservation of Linear momentum –work done in an elastic string –work done by a couple – power. Horsepower - conservative forces - energy – potential energy and kinetic energy –principles of energy. 12hrs

UNIT II

Introduction – Definitions – path of a projectile – characteristics of the motion of the projectile – proving the path is a parabola – up to finding the velocity of the projectile in magnitude and direction at the end of time t – Given the magnitude of the velocity of projection to show that there are two directions of projection for the particle so as to reach a given point. 12hrs

UNIT III

Radial and transverse component of velocity and acceleration – Differential equation of central orbits – Velocities in a central orbit – Two fold problems in central orbits – Apses and apsidal distances – Given the law of force to the pole to find the orbit. 12hrs

UNIT IV

Introduction – simple harmonic motion in a straight line – general solution of the SHM equation – composition of two simple harmonic motions of the same period and in the same straight line – composition of two simple harmonic motions of the same period in two perpendicular directions. 12hrs

UMA 28

UNIT V

Introduction – Fundamental laws of Impact – Newton’s experimental law- Impact of a smooth sphere on a fixed smooth plane – Direct impact of two smooth spheres – loss of kinetic energy due to direct impact of two smooth spheres – Oblique impact of two smooth spheres. 12hrs

Text Book

SEMESTER IV

2014 – 2015 onwards

Total Credits = 3

12UMA4S2

Total Hours = 30

PART IV - Skill Based Subject 2

THEORY OF NUMBERS

Objectives:

To enable the learners to understand the concept of Number systems.

Unit I

Divisibility : Associates – Division algorithm – gcd (HCF) - Euclidean algorithm – l.c.m. 6hrs

Unit II

Prime and Composite Numbers : Coprimes – sieve of Eratosthenes – Euclid's theorem
– unique factorization – Fundamental theorem of Arithmetic – Positional representation of integers
- Euler function $\Phi(n)$ – **greatest integer function***. 6hrs

Unit III

Congruences : Definition – residue classes – complete and least residue systems -
residue systems – Divisibility tests – linear congruences - solution of congruences –
Chinese remainder theorem. 6hrs

Unit IV

Theorems of Fermat and Wilson : Little Fermat's theorem – Euler's extension –
inverse modulo – Wilson's theorem and its converse – Lagrange's theorem - **Wolstenholme theorem***. 6hrs

Unit V

Exponent of an integer – primitive roots – Number of primitive roots – 1, 2, 4, p^a , $2p^a$ alone
have primitive roots – test for primitive roots – Legendre theorem. 6hrs

Text book

Professor S.Kumaravelu and Professor Susheela Kumaravelu, Elements of Number Theory, Raja Sankar Offset Printers, Sivakasi, 1st Edition, January 2002.

2014 – 2015 onwards

Total Credits = 3

12UMA509

Total Hours = 75

CORE PAPER 9 REAL ANALYSIS I

Objectives:

To enable the learners to understand the notion of

- (i) The real numbers
- (ii) The sets and its characterizations, properties and related theorems
- (iii) The adherent points, accumulation points,
- (iv) Covering theorems, compactness, metric spaces, continuity of a function and related theorems.

UNIT I

The Real and Complex number systems the field axioms, the order axioms –integers –the unique Factorization theorem for integers –Rational numbers –Irrational numbers –Upper bounds, maximum Elements, least upper bound –the completeness axiom –some properties of the supremum –properties of the integers deduced from the completeness axiom- The Archimedian property of the real number system –Rational numbers with finite decimal representation of real numbers –absolute values and the triangle inequality –the Cauchy-Schwarz, inequality* –plus and minus infinity and the extended real number system. 15hrs

UNIT II

Basic notions of a set theory. Notations –ordered pairs –Cartesian product of two sets – Relations and functions – further terminology concerning functions –one –one functions and inverse –composite functions –sequences –similar sets-finite and infinite sets –countable and uncountable sets – uncountability of the real number system –set algebra –countable collection of countable sets. 15hrs

UNIT III

Elements of point set topology: Euclidean space R^n –open balls and open sets in R^n . The structure of open Sets in R^n –closed sets and adherent points –The Bolzano –Weierstrass theorem –the Cantor intersection Theorem. 15hrs

UNIT IV

Covering –Lindelof covering theorem –the Heine Borel covering theorem –Compactness in \mathbb{R}^n – Metric Spaces –point set topology in metric spaces –**compact subsets of a metric space*** –Boundary of a set. 15hrs

UNIT V

Convergent sequences in a metric space –Cauchy sequences –Completeness sequences –complete metric Spaces. Limit of a function –Continuous functions –continuity of composite functions. 15hrs

Text Book

T.M.Apostol, Mathematical Analysis, 2nd ed., Narosa Publishing Company, Chennai, 1990.

Total Credits = 4

13UMA510
Total Hours = 90

CORE PAPER 10 COMPLEX ANALYSIS I

Objectives:

Complex analysis is recognized as an essential part of mathematical background for engineers, physicists and other scientists.

- i) The detailed study about continuity, differentiability and analyticity of a complex function will help the students to acquire a deeper of the theory.
- ii) To understand complex integration, Cauchy's integral formulae and Cauchy's fundamental theorem.
- iii) To solve the problem in these areas.
- iv) To develop skills to write competitive exams.

UNIT I

Complex number system : Absolute value of a complex number – **Argument*** – Inequalities in terms of moduli – Relevant examples. Complex plane: Elementary transformation. i) $w = z + \alpha$ ii) $w = az$
iii) $w = 1/z$ – Definition of extended complex plane – Stereographic projection. Elementary and conformal mappings: Bilinear transformation. 18hrs

UNIT II

Analytic functions : Complex functions: **Limit of a function*** – Continuity of a function – Differentiability and Analyticity of a function. Necessary conditions for differentiability – Sufficient conditions for differentiability – Cauchy-Riemann equations in polar coordinates – Definition of entire function. 18hrs

UNIT III

Power Series and Elementary functions: Power Series - Absolute convergence of a Power Series – Circle of convergence – Analyticity of the sum of power series in the Circle of convergence (term by term differentiation of a series) Elementary functions: Exponential, Trigonometric and Hyperbolic functions. 18hrs

UNIT IV

Conjugate Harmonic functions: Definition and determination, Conformal Mapping: Isogonal mapping – Conformal mapping-Mapping $z \mapsto f(z)$, where f is analytic, particularly the mappings.
 $w = e^z$; $w = \sin z$; $w = 1/2(z + 1/z)$. 18hrs

UNIT V

Complex Integration: Simple rectifiable oriented curves- Integration of complex functions-Definite integral – Simply connected region - Proof of Cauchy's Theorem (using Goursat's lemma for a simply connected region). Cauchy's integral formula, Cauchy's integral formula for first derivatives - Cauchy's integral formula for higher derivatives -Morera's theorem. 18hrs

Total Credits = 4

12UMA511
Total Hours = 90

CORE PAPER 11 MODERN ALGEBRA I

Objectives:

Modern Algebra enables one to interpret the results of classical algebra. The main objective of this paper is to introduce abstract concepts like groups, rings and fields. Different types of groups like abelian group, cyclic group, normal group, quotient group etc. widen the knowledge of students and different theorems dealing with them enrich the logical reasoning of the pupils. The concepts of Rings, Integral domain, fields, Homeomorphism, kernel of homeomorphism in groups and rings give rise to many useful results in Algebra. Algebra has its applications in higher analysis, Geometry, Physics, Chemistry and modern theory of real functions.

UNIT I

Sets – mappings* – Relations and binary operations – Groups: Abelian group, Symmetric group
Definitions and Examples.

16hrs

UNIT II

Subgroups* – Cyclic subgroup - Index of a group – Order of an element – Fermat theorem - A
Counting Principle - Normal Subgroups and Quotient Groups.

18hrs

UNIT III

Homomorphisms – Cauchy's theorem for Abelian groups – Sylow's theorem for Abelian groups
Automorphisms – Inner automorphism - Cayley's theorem.

19hrs

UNIT IV

Rings: Definition and Examples –Some Special Classes of Rings – Commutative ring – Field –
Integral domain - Homomorphisms of Rings.

18hrs

UNIT V

Ideals and Quotient Rings – More Ideals and Quotient Rings – Maximal ideal - The field of
Quotients of an Integral Domain.

19hrs

CORE PAPER 12 PROGRAMMING IN C – THEORY

Objectives:

To enable the students to learn about the basic structure, statements, data types, operators of C, various control statements, functions and various concepts of C language.

UNIT I

Overview of C : Importance of C - **Sample C Programs*** - Basic structure of C program- Programming style - Executing a C Program.

Constants, Variables and Data types : – Character set – C tokens – Keywords and identifiers – Constants – Variables – Data types – Declaration of variables – Assigning values to variables – Defining symbolic constants. 12hrs

UNIT II

Operators and Expression : Arithmetic of Operators – Relational Operators – Logical Operators – Assignment Operators- Increment and decrement Operators – Conditional Operator – Bitwise Operators- Special Operators – Arithmetic expressions – Evaluation of expressions – Precedence of arithmetic operators – Some computational problems – Type conversions in expressions – **Operator precedence and associativity*** – **Mathematical functions***. 12hrs

UNIT III

Managing Input and Output Operators : Reading a character – Writing a character – Formatted Input – Formatted Output. 12hrs

UMA 38

UNIT IV

Decision Making and Branching : Decision making with IF statement – Simple IF statement – The IF ELSE statement – Nesting of IF ... ELSE statements – The ELSE IF ladder – The switch statement – The ? : operator- The GOTO statement. 12hrs

UNIT V

Decision Making and Looping : The WHILE statement – The DO statement – The FOR statement – Jumps in loops. 12hrs

PART III - Skill Based Subject 3

ACCOUNTANCY – I

Objectives:

To enable the students to understand the concept of accounting.

UNIT I

Accounting concept, conventions– **rules of accounts*** 6hrs

UNIT II

Books of accounts double entry system- Journal, ledger and trial balance. 6hrs

UNIT III

Subsidiary Books-Purchase Book, Sales Book, Cash Book, Petty Cash Book.

6hrs

UNIT IV

Final accounts of sole trading concerns.(Simple problems only)

6hrs

UNIT V

Depreciation- Causes-Methods of Depreciation -Merits & demerits. (Theory only).

6hrs

40% Theory – 60% Problems

SEMESTER VI

2014-2015 onwards

Total Credits = 4

12UMA613

Total Hours = 90

CORE PAPER 13 **REAL ANALYSIS II**

Objectives:

To enable the learners

- (i) To understand the concept of functions,
- (ii) Connectedness, uniform continuity, fixed point and related theorems
- (iii) Derivatives and related theorems
- (iv) Functions of bounded variations and related theorems
- (iv) Riemann stieltjes integrals and properties, theorems.

UNIT I

Examples of continuous functions –continuity and inverse images of open or closed sets – functions continuous on compact sets –Topological mappings –Bolzano's theorem. 18hrs

UNIT II

Connectedness –components of a metric space – Uniform continuity : Uniform continuity and compact sets –fixed point theorem for contractions –monotonic functions. 18hrs

UNIT III

Definition of derivative –Derivative and continuity –**Algebra of derivatives*** – the chain rule – one sided derivatives and infinite derivatives –functions with non-zero derivatives –zero derivatives and local extrema –Roll's theorem –The mean value theorem for derivatives –Taylor's formula with remainder.

18hrs

UNIT IV

Properties of monotonic functions –**functions of bounded variation*** –total Variation –additive properties of total variation on (a, x) as a function of x – functions of bounded variation expressed as the difference of increasing functions –continuous functions of bounded variation. 18hrs

UMA 43

UNIT V

The Riemann – Stieltjes integral : Introduction –Notation –The definition of Riemann –Stieltjes integral –linear properties –Integration by parts –change of variable in a Riemann –stieltjes integral – Reduction to a Riemann integral. 18hrs

Text Book

Tom. M. APOSTOL, Mathematical Analysis, 2nd ed., Addison-Wisely.
Narosa Publishing Company, Chennai, 1990.

Unit I	Chapter 4	Sections 4.11 to 4.15
Unit II	Chapter 4	Sections 4.16, 4.17, 4.19, 4.20, 4.21, 4.23
Unit III	Chapter 5	Sections 5.2 to 5.10 and 5.12
Unit IV	Chapter 6	Sections 6.2 to 6.8
Unit V	Chapter 7	Sections 7.1 to 7.7

2014 – 2015 onwards

Total Credits = 4

13UMA614

Total Hours = 90

CORE PAPER 14 COMPLEX ANALYSIS II

Objectives:

The syllabus formed for Complex Analysis II is the continuation of that of Complex Analysis I, Further

- i) To learn about Taylor Series and Laurent series.
- ii) To understand the concept of singularities, residues.
- iii) To study the concept of definite integrals.
- iv) And to solve problems in these areas.

UNIT I

Zeros of a function – Cauchy's Inequality* – Liouville's theorem – Fundamental theorem of algebra – Maximum modulus theorem – Gauss mean value theorem. Mean value theorem of a harmonic function on a circle.

18hrs

UNIT II

Taylor's and Laurent's series – Taylor series – Laurent series .

18hrs

UNIT III

Singularities and Residues : Singularities* - Isolated singularities – Removable Singularity-Pole Essential singularity. Behaviour of a function at an isolated singularity. Residues: Residue – Calculus of residues-Residue theorem .

18hrs

UNIT IV

Real definite integrals: Evaluation using the calculus of residues :

(i) Integrals of the form $\int_0^{2\pi} f(\cos \theta, \sin \theta) d\theta$ where f is a rational function in $\cos \theta$ and $\sin \theta$ –

Integral with $-\infty$ and $+\infty$ as lower and upper limits with the following integrals:

UMA 45

- ii) $P(x)/Q(x)$ where the degree of $Q(x)$ exceeds that of $P(x)$ at least 2.
- iii) $(\sin ax).f(x)$, $(\cos ax).f(x)$, where $a>0$ and $f(z) \rightarrow 0$ as $z \rightarrow \infty$ and $f(z)$ does not have a pole on the real axis. 18hrs

UNIT V

Meromorphic functions: Meromorphic functions – Theorem on number of zeros minus number of poles – Principle of argument – Rouché's theorem – Fundamental theorem of algebra – Problems (Examples) related to these theorems. 18hrs

Text Book

P. Duraipandian, Laxmi Duraipandian and D. Muhilan Complex analysis, Emerald Publishers, Chennai –2, 1997.

Unit I	Chapter 8	Sections 8.10 , 8.11 (Excluding theorem 8.19)
Unit II	Chapter 9	Sections 9.1 , 9.3, Relevant examples in 9.13
Unit III	Chapter 9	Sections 9.5 to 9.10, Simple examples in 9.13
	Chapter 10	Sections 10.1, 10.2 Simple examples in 10.4
Unit IV	Chapter 10	Sections 10.3 Type I, II, III, (Excluding type IV) Relevant Problems in 10.4.
Unit V	Chapter 11	Sections 11.1 Theorems 11.1,11.2,11.3 and 11.4 (Omitting theorems 11.5 and 11.6), 11.2, Relevant examples in 11.3

SEMESTER VI

2014 – 2015 onwards

Total Credits = 4

12UMA615

Total Hours = 90

CORE PAPER 15 MODERN ALGEBRA II

Objectives:

The Objective of this paper is to introduce a new algebraic system vectorspaces which has its origin in Geometry and Physics. Concepts in vectorspaces like linear independence, basis, dimension etc have universal applications and these are potent and effective tools in all branches of mathematics. The concept of linear transformation and matrices play an important role. In Research, problem solving in this paper will enrich the knowledge of logical thinking.

UNIT I

Matrices: Introduction – **Addition and Scalar Multiplication of Matrices*** – **Product of Matrices*** – Transpose of a Matrix – Matrix Inverse – Symmetric and Skew – Symmetric Matrices. 16hrs

UNIT II

Hermitian and Skew-Hermitian Matrices – Orthogonal and Unitary Matrices – Rank of a Matrix – Characteristic Roots and Characteristic Vectors of a Square Matrix. 16hrs

UNIT III

Vector space: Elementary Basic Concepts – Subspace of a Vector space – Homomorphism – Isomorphism – Internal and External direct sums – Linear span – Linear Independence and Bases. 20hrs

UNIT IV

Dual Spaces – Annihilator of a subspace – Inner Product Spaces – Norm of a Vector – Orthogonal Vectors - Orthogonal Complement of a subspace – Orthonormal set. 20hrs

UMA 47

UNIT V

Linear Transformations: Algebra of Linear Transformations – Regular, Singular Transformations
– Range of T – Rank of T – Characteristic Roots – Characteristic Vectors - Matrices. 18hrs

Text Books

R.Balakrishnan and M. Ramabadran, Modern Algebra, Vikas Publishing House Pvt. Ltd, New Delhi, (Second Revised Edition 1994) (For Units I & II)

Unit I	Chapter 1	Sections 1.1 to 1.3, 1.5 to 1.7
Unit II	Chapter 1	Sections 1.8 and 1.9
	Chapter 2	Section 2.9
	Chapter 3	Section 3.9

I.N. Herstein, Topics in Algebra, John Wiley & Sons, New York, 2003.

(For Units III, IV & V)

Unit III	Chapter 4	Sections 4.1 and 4.2
Unit IV	Chapter 4	Sections 4.3 and 4.4
Unit V	Chapter 6	Sections 6.1 , 6.2 and 6.3

SEMESTER VI

2014 – 2015 onwards

Total Credits = 3

13UMA6S4

Total Hours = 30

PART IV - Skilled Based Subject 4

ACCOUNTANCY – II

Objectives:

To enable the students to understand the concept of cost accounting and its elements and types, preparations of cost sheet, Pricing of Material Issues ,budgeting control and Working Capital.

UNIT I

Cost Accounting –Elements of Costing- **Types of Costing***.

6hrs

UNIT II

Preparations of simple cost sheet. (Simple problems only)

6hrs

UNIT III

Pricing of Material Issues-FIFO-LIFO (Simple problems only)

6hrs

UNIT IV

Budgeting and budgeting control-preparation of cash budget, fixed and flexible budget.
(Simple problems only).

6hrs

UNIT V

Working Capital – Concepts – Kinds – Important factors.

6hrs

40% Theory – 60% Problems

Text Book

2014-2015 onwards

Total Credits = 5

Total Hours = 75

Major Elective Paper

DISCRETE MATHEMATICS AND AUTOMATA THEORY

Objectives:

On successful completion of this paper students should gain knowledge about the Logic, Automata theory and Boolean Algebra.

UNIT I

Logic – introduction – T F – statements – Connectives - atomic and compound statements – **well formed formulae*** – Truth Table of a formula – Tautology. 15hrs

UNIT II

Tautological implications and equivalence of formulae – Replacement process – Functionally complete sets of connectives and duality law - Normal forms – Principal normal forms. 15hrs

UNIT III

Theory of inference – indirect method of proof – open statements – Quantifiers. 15hrs

UNIT IV

Boolean algebra – **Boolean Polynomials*** – Karnaugh map (K – map for 5 variables and 6 variables are not included) Switching circuits (simple circuits). 15hrs

UNIT V

Theory of Automata – definition – description – transition systems – properties – acceptability of a string by a finite automaton – Non deterministic finite state machines - the equivalence of DFA and NDFA - Mealy and Moore models

15hrs

Major Elective Paper

OPERATIONS RESEARCH

Objectives:

This Paper deals with problems involving multiple objectives, constraints, policies and alternatives. Our aim is to locate the optimum solution to a problem whatever may be the objective. Learners are exposed to different areas like Linear Programming Problem, Transportation Problem, Assignment Problem, theory of games and specified networks.

UNIT I

Linear programming Problem – Introduction – Mathematical formulation of the problem – Graphical solution method – General Linear Programming Problem – The Simplex method – **Two phase simplex method*** – Charnes method of penalties. 18hrs

UNIT II

Transportation problems - The Assignment and Routing problems. 13hrs

UNIT III

Games and Strategies – Introduction – Two person zero sum game – The maximum and minimum principle games – Games without saddle points- mixed strategies – Graphical method of $2 \times n$ and $m \times 2$ games. 15hrs

UNIT IV

Inventory – Introduction – functions of inventory – cost associated with inventory – Economic order quantity – **Economic order problem with price breaks*** (one price break and two price breaks only) 17hrs

UNIT V

Network scheduling by CPM and PERT . 12hrs

Text Book

Kantiswarup, P.K.Gupta and Man Mohan, Operations Research, 9th Thoroughly Revised Ed., Sultan Chand & Sons, New Delhi, 2001.

Unit I	Chapter 2	Sections 2.1, 2.2
	Chapter 3	Sections 3.1 to 3.4
	Chapter 4	Sections 4.1 to 4.3
Unit II	Chapter 10	Sections 10.1 to 10.13
	Chapter 11	Sections 11.1 to 11.6
Unit III	Chapter 17	Sections 17.1 to 17.6
Unit IV	Chapter 19	Sections 19.1 to 19.8
Unit V	Chapter 21	Sections 21.1 to 21. 7

Total Hours = 75

Major Elective Paper

NUMERICAL METHODS

Objectives:

Various Numerical Methods of solving Algebraic and simultaneous linear algebraic equations are studied in this paper. A detailed information about differences and different interpolation formulae which are helpful to find out unknown value where a set of values are given. To expose the students to the various numerical methods for different kinds of problems.

UNIT I

The numerical solution of algebraic and transcendental equations –The bisection method –Method of successive Approximation –The method of false position - **Newton-Raphson method***. 15hrs

UNIT II

Simultaneous linear algebraic equations: **Gauss elimination method*** - Method of triangularisation –Jacobi method of iteration – Gauss- Siedel method of iteration . 15hrs

UNIT III

Finite differences: First difference –higher differences –difference tables – expressing any value of y in terms of the initial value y_0 and the differences- backward difference –expression of any value of y in terms of y_n and the backward differences of y_n –central differences –properties of the operator Δ . Differences of a polynomial. The operator E –Relation between E and Δ -Relation between D and Δ . Other difference operators –Relationship between operators. 15hrs

UNIT IV

Interpolation –Gregory – Newton's forward interpolation formula –Gregory –Newton's backward interpolation formula. Gauss's forward interpolation Formula – Gauss's backward interpolation formula - Stirling's formula –Bessel's formula. 15hrs

UNIT V

Divided differences - Newton's interpolation formula for unequal intervals - Lagrange's Interpolation formula –Inverse interpolation. Numerical differentiation : Newton's forward difference formula to compute the derivatives –Newton's backward difference formula to compute the derivatives – Derivatives using Stirling's formula . 15hrs

LINEAR ALGEBRA

Objectives:

To enable the learners to understand the concept of Elementary Canonical Forms, the Rational and Jordan forms and Bilinear forms.

UNIT I

Elementary Canonical Forms : **Characteristic values – Annihilating polynomials*** – Invariant subspaces. 15hrs

UNIT II

Elementary canonical forms: Direct – sum decompositions – Invariant direct sums- The primary decomposition theorem. 15hrs

UNIT III

The Rational and Jordan forms: Cyclic subspaces and Annihilators – cyclic decompositions and the Rational Form. 15hrs

UNIT IV

The Rational and Jordan forms: The Jordan form computation of invariant factors. 15hrs

UNIT V

Bilinear forms: Bilinear forms – symmetric Bilinear forms. 15hrs

Text Book

Kenneth Hoffman and Ray Kunze, Linear Algebra, 2nd Edition, Prentice Hall of India Pvt., Ltd., New Delhi, 1996.

Unit I	Chapter 6	Sections	6.1 to 6.4
Unit II	Chapter 6	Sections	6.6 to 6.8
Unit III	Chapter 7	Sections	7.1, 7.2
Unit IV	Chapter 7	Sections	7.3 , 7.4
Unit V	Chapter 10	Sections	10.1, 10.2

BUSINESS APPLICATION SOFTWARE

Objectives:

To enable the students to acquire knowledge about some advanced topics in Software like windows 95, Microsoft Excel and Microsoft Access.

UNIT I

Windows 95 : Introduction to windows 95 – Overview – Basic skills – disk organization – applications. 15hrs

UNIT II

Microsoft Word: Word processing overview – creating and editing documents – formatting document – creating report and new letter – creating table and merging document – creating web pages. 15hrs

UNIT III

Microsoft Excel : Spread sheet overview – Crating work sheet* – managing and analyzing complex worksheet – creating charts – creating from template – sharing data between applications. 15hrs

UNIT IV

Microsoft Access: Database overview – creating database – modifying table and creating form – filtering and querying tables – creating reports and mailing labels – sahring information between applications. 15hrs

UNIT V

Microsoft Power Point : Features of Power Point – Text and formats* – Animation, Art and sound – Making the presentation. Template and Reusability – File Management. 15hrs

Total Hours = 105

ALLIED A PAPER 1 MATHEMATICS I (For Branch III Physics)

Objectives:

The paper “Allied Mathematics” have been included in the curriculum of Physics with the idea to impart basic knowledge in various fields of mathematics. This paper includes Theory of equations, Numerical Methods, Matrices, Trigonometric functions and Laplace Transforms which have a various applications in Physics.

UNIT I

Theory of equations: **Roots of an equation*** – Relations between Roots and Coefficients – Transformation of equations – Increasing and decreasing the roots of an equation – Reciprocal equations –Descarte’s rule of signs. 21hrs

UNIT II

Numerical methods – Solution of algebraic equations by bisection method and Newton- Raphson method – Solution of simultaneous linear algebraic equations by Gauss elimination method 21hrs

UNIT III

Matrices: Eigen values and Eigen vectors - Cayley - Hamilton theorem (without proof) - Verification – Use of this theorem to find the inverse of a matrix. 21hrs

UNIT IV

Trigonometry: **Applications of De Moivre’s theorem- $\cos n\theta$, $\sin n\theta$, $\tan n\theta$ *** - Expansions of $\cos n\theta$, $\sin n\theta$ - Expressions of $\sin \theta$, $\cos \theta$ and $\tan \theta$ in powers of θ - Simple limit problems like $\theta \rightarrow 0$ and $\theta \rightarrow \pi/2$ – Hyperbolic functions – Relations between circular and hyperbolic functions- Inverse hyperbolic functions – Real and imaginary parts of $\sin (\alpha+i\beta)$, $\cos (\alpha+i\beta)$, $\tan (\alpha+i\beta)$, $\tan^{-1}(\alpha+i\beta)$. 21hrs

UMA 63

UNIT V

Laplace Transforms: Definition – Laplace Transform of e^{at} , $\cos at$, $\sin at$, $\cosh at$, $\sinh at$, t^n , n , a positive integer – $e^{at} f(t)$, $t^n f(t)$, $f'(t)$, $f''(t)$ – Inverse Laplace Transform of standard functions – Solving differential equations of Second order with constant coefficients using Laplace Transform. 21hrs

ALLIED A PAPER 2 MATHEMATICS II (For Branch III Physics)

Objectives:

The paper “Allied Mathematics” have been included in the curriculum of Physics with the idea in the mind to impart basic knowledge in various fields of mathematics. This paper includes calculus, integration of vectors, PDE and Fourier Series which have a various applications in Physics.

UNIT I

Calculus - Differentiation: Curvature and radius of Curvature in Cartesian and polar form – **evolutes*** – **involutives*** – pedal equations - Beta and Gamma function – Relations. 21hrs

UNIT II

Vector calculus – Gradient of a scalar point function – Divergence and curl of a vector point function. 21hrs

UNIT III

Integration of vectors : Integration of vector functions, - Line integrals – Surface integrals – Volume integrals. 21hrs

UNIT IV

Formation of partial differential equations eliminating arbitrary constants and arbitrary functions – Solutions of standard types of first order equations – $f(p, q) = 0$, $f(x, p, q) = 0$, $f(y, p, q) = 0$, $f(z, p, q) = 0$, $f_1(x, p) = f_2(y, q)$, $z = px + qy + f(p, q)$. Charpit method (problems only) – Lagrange method of solving linear partial differential equations $Pp + Qq = R$. 21hrs

UNIT V

Fourier series – Definition – Finding Fourier coefficients for a given periodic function with period 2π -

Odd and Even functions – Half range series.

21hrs

ALLIED A PAPER 1 MATHEMATICS I

(For Branch IV Chemistry)

Objectives:

The paper “Allied Mathematics” is designed in the curriculum of Chemistry with the idea to impart basic knowledge in various fields of Mathematics. This paper comprises of Ordinary Differential Equations, Numerical Methods, Matrices, Trigonometric functions and Laplace Transforms which are main tools to study Chemistry.

UNIT I

Second order linear differential equations with constant coefficients- $f(x)=e^{mx}$, $\sin mx$, $\cos mx$, x , x^2 - First order higher degree differential equations- Solvable for x , y , p - Clairaut's form
21hrs

UNIT II

Numerical methods – Solution of algebraic equations by Newton- Raphson method – Solution of simultaneous linear algebraic equations by Gauss elimination method, Gauss Jacobi and Gauss Seidel method of iteration
21hrs

UNIT III

Matrices: Introduction, Product of matrices, **Transpose of a matrix***, matrix inverse- Characteristic roots and Characteristic vectors - Cayley - Hamilton theorem (without proof) – Verification.
21hrs

UNIT IV

Trigonometry: **Expansions of $\cos n\theta$, $\sin n\theta$ *** - Expressions of $\sin \theta$, $\cos \theta$ and $\tan \theta$ in powers of θ - Hyperbolic functions – Relations between circular and hyperbolic functions- Inverse hyperbolic functions – Real and imaginary parts of $\sin (\alpha+i\beta)$, $\cos (\alpha+i\beta)$, $\tan (\alpha+i\beta)$
21hrs

UNIT V

Laplace Transforms: Definition – Laplace Transform of e^{at} , $\cos at$, $\sin at$, $\cosh at$, $\sinh at$, t^n , n , a positive integer – $e^{at} f(t)$, $t^n f(t)$, $f'(t)$, $f''(t)$ – Inverse Laplace Transform of standard functions – Solving differential equations of Second order with constant coefficients using Laplace Transform. 21hrs

SEMESTER II

2014 – 2015 onwards
Total Credits = 5

13UMA2A2
Total Hours = 105

ALLIED A PAPER 2 MATHEMATICS II (For Branch IV Chemistry)

Objectives:

The Paper titled “Allied Mathematics” is included in the curriculum of Chemistry to impart basic knowledge in various fields of Mathematics. This paper comprises of Differentiation, Calculus, Integration of vectors, Partial Differential Equations and Fourier Series which are some of the essentials to study Chemistry.

UNIT I

Calculus - Differentiation: Derivatives of standard functions (**Algebraic***, Trigonometric, Logarithmic, Exponential) . Curvature and radius of Curvature in Cartesian form. 21hrs

UNIT II

Evaluation of double and triple integral using Jacobian only- Beta and Gamma function–Relations, properties and simple problems. 21hrs

UNIT III

Vector calculus – Gradient of a scalar point function – Divergence and curl of a vector point function. 21hrs

UNIT IV

Partial differential equation :**Formation of Partial differential equations by eliminating arbitrary constants and arbitrary functions*** – Solutions of standard types of first order equations – $f(p, q) = 0$, $f(x, p, q) = 0$, $f(y, p, q) = 0$, $f(z, p, q) = 0$, $f_1(x, p) = f_2(y, q)$, $z = px + qy + f(p, q)$, Clairaut’s form – Lagrange method of solving linear partial differential equations $Pp + Qq = R$. (problems only) 21hrs

UNIT V

Fourier series – Definition – Finding Fourier coefficients for a given periodic function with period 2π -

Odd and Even functions – Half range series.

21hrs

CIA / END SEMESTER THEORY EXAMINATION QUESTION PAPER PATTERN

B.SC MATHEMATICS

Pattern I

Time : 3 hrs

Max Marks : 75

Section A

10 Questions
(Multiple Choice – 4 Choices only)

10x1 = 10 Marks

Section B

5 Questions
(Either Or Type)

5x5 = 25 Marks

Section C

5 Questions
(Either Or Type)

5x8 = 40 Marks

Total

75 Marks

Distribution of Marks for CIA

Tests (2)	15 Marks
Assignment	5 Marks
Attendance	5 Marks
<hr/>	
Total	25 Marks

UMA 71

**QUESTION PAPER PATTERN
for
PART IV - ENVIRONMENTAL STUDIES AND VALUE EDUCATION**

Instruction hours / cycle : 2

Duration of Examination : 3 hours

Either / or Type 5 x 10 = 50 Marks

Total Marks : 50

**QUESTION PAPER PATTERN
for
PART IV - GENERAL AWARENESS (ONLINE)**

Instruction hours / cycle : 2

Duration of Examination : 3 hours

END OF SEMESTER EXAMINATION (ESE)

Total Marks : 75

1. 150 questions are to be given. Each question carries ½ mark.
2. In each unit, 30 questions are to be given, covering all the 5 units.

Major Elective Papers

(2 papers are to be chosen from the following 4 papers)

1. Fluid Dynamics
2. Advanced Operations Research
3. Fundamentals of Actuarial Mathematics
4. Cryptography

Non Major Elective Papers

(2 papers are to be chosen from the following 4 papers)

1. System Analyses and Design
2. Visual Basic and Oracle
3. Fuzzy Sets and Fuzzy Logic
4. Measure and Integration

Tally Table

Part	Subject	Total Marks	Total Credits
I	Core – Theory / Practical / Project (18)	1800	70
	Major Elective Paper (2)	200	10
	Non Major Elective Paper (2)	200	10
	Grand Total (22)	2200	90
II (Optional)	ALC (3) (Maximum)	300 (Maximum)	6 (Maximum)

Note

CBCS – Choice Based Credit System, CIA – Continuous Internal Assessment,

ESE – End Semester Examination, CP - Core Paper ,

NMEP – Non Major Elective Paper, CPr – Core Practical, PRO - Project

MEP - Major Elective Paper, ALC – Advanced Learner’s Course

(Self study courses to earn extra credits)

25% CIA is applicable to all subjects except ALC (CIA is not applicable to ALC).

JOCs are optional for earning extra credits. JOCs are conducted within 4 hours/cycle outside college hours. A list of JOCs is given at the end.

PMA 1

SEMESTER I

2014 – 2015 onwards
Total Credits = 5

12PMA101
Total Hours = 105

Core Paper 1 ALGEBRA

Objectives:

Study of groups, rings, fields and linear transformations are widely used in many research fields. The concept of mappings are applied in the subjects like real analysis, complex analysis, topology etc. Its objective is to show the needs from which a modern mathematical attitude may grow. It is of great help in any further axiomatic study of mathematics. Matrices studied in this paper provide additional information to students in their forms and in their role in transformations. Contemporary mathematics and mathematical physics make extensive use of abstract algebra.

UNIT I

Group Theory: Another Counting Principle – Conjugacy* – Normalizer – Cauchy's Theorem - Sylow's Theorem - Direct Products. 21hrs

UNIT II

Ring Theory: **Euclidean Rings*** – Unique Factorization Theorem - A Particular Euclidean Ring - Fermat's Theorem - Polynomial Rings - Polynomials over the Rational Field - Gauss' Lemma - The Eisenstein Criterion. 21hrs

UNIT III

Fields: Extension fields - Algebraic Extension – Roots of polynomials – Remainder Theorem Splitting field. 20hrs

UNIT IV

More about roots: Simple Extension . The Elements of Galois Theory – Fixed field of a Group - Normal Extension - The Galois group of a polynomial - Fundamental Theorem of Galois Theory. 22hrs

PMA 2

UNIT V

Linear Transformations: Canonical Forms – Similar Transformation – Triangular Form – Trace and Transpose – Symmetric Matrix – Skew Symmetric Matrix - Hermitian, Unitary and Normal Transformations. 21hrs

Text Book

I.N.Herstein, Topics in Algebra, 2nd Edition, Wiley Eastern Limited, 1992.

Unit I	Chapter 2	Sections 2.11 to 2.13.
Unit II	Chapter 3	Sections 3.7 to 3.10.
Unit III	Chapter 5	Sections 5.1 and 5.3.
Unit IV	Chapter 5	Sections 5.5 and 5.6.
Unit V	Chapter 6	Sections 6.4, 6.8 and 6.10.

*** Self Study (Questions may be asked from these portions also)**

PMA 3

SEMESTER I

2014- 2015 onwards
Total Credits = 5

12PMA102
Total Hours = 90

Core Paper 2 REAL ANALYSIS

Objectives:

Real Analysis plays an important role in higher mathematics. Its main objective is to study variables and their relationships. Moreover

- i) To learn about the Riemann's Stieltjes Integral, multivariable differential calculus, implicit function and inverse function theorems.
- ii) To develop skills to participate in mathematical competitions and competitive examinations.

UNIT I

The Riemann – Stieltjes Integral : Monotonically increasing integrators. **Upper and lower integrals*** –Additive and Linearity properties of upper and lower integrals –Riemann's condition – Comparison theorems –Integrators of bounded variation. 18hrs

UNIT II

Sufficient conditions for existence of Riemann - Steiltjes integrals - Necessary conditions for existence of Riemann- Steiltjes integrals –Mean value theorems for R S integrals - The integrals as a function of the interval – Second fundamental theorem of integral calculus – Change of variable in a Riemann integral – Second Mean value theorem for Riemann integral. 18hrs

UNIT III

Multivariable Differential Calculus - Introduction –The directional derivative -Directional derivatives and continuity –The total derivative – The total derivative expressed in terms of partial derivatives – The matrix of a linear function - **The Jacobian Matrix*** - The chain rule. 18hrs

UNIT IV

The Mean value Theorem for differentiable functions - A sufficient condition for differentiability – A sufficient condition for equality of mixed partial derivatives – Taylor's formula for functions from \mathbb{R}^n to \mathbb{R}^1 . 18hrs

PMA 4

UNIT V

Implicit Functions and Extremum Problems: Introduction - Functions with nonzero Jacobian determinant – The inverse function theorem – The implicit function theorem.

18hrs

Text Book

12PMA103

Total Credits = 5

Total Hours = 105

Core Paper 3

ORDINARY DIFFERENTIAL EQUATIONS

Objectives:

Differential equations play an important role in Science, Engineering and Social Science. Many phenomena in these branches are interpreted in terms of differential equations and their solutions. The aim of this paper is to bring together the qualitative theory of differential equations systematically.

UNIT I

Second order linear equations with ordinary points –Legendre equation and Legendre polynomials -Second order equations with regular singular points –Bessel equation. 21hrs

UNIT II

Systems of first order equations – Existence and uniqueness theorem - Fundamental matrix. 21hrs

UNIT III

Non –homogeneous linear systems –Linear systems with constant co-efficients
- Linear systems with periodic co-efficients. 21hrs

UNIT IV

Successive approximations –Picard's theorem –Non-uniqueness of solutions – continuation and dependence on initial conditions -**Existence of solutions in the large*** -Existence and uniqueness of solutions of systems. 21hrs

PMA 6

UNIT V

Fundamental results –Strum’s comparison theorem –**Elementary linear Oscillations*** -
Comparison theorem of Hille-Wintner Oscillations of $x'' + a(t)x = 0$ –Elementary non-linear
oscillations. 21hrs

Text Book

S.G.Deo and V.Raghavendra, Ordinary Differential Equations and Stability Theory, Tata McGraw
- Hill Publishing Company Ltd, New Delhi, 1993.

Unit I	Chapter 3	Sections 3.2 to 3.5
Unit II	Chapter 4	Sections 4.2 to 4.4
Unit III	Chapter 4	Sections 4.5 to 4.7
Unit IV	Chapter 5	Sections 5.3 to 5.8
Unit V	Chapter 6	Sections 6.1 to 6.6

SEMESTER I

2014 – 2015 onwards
Total Credits = 5

12PMA104
Total Hours = 90

Core Paper 4 NUMERICAL METHODS

Objectives:

All the problems in nonlinear equations, system of equations, ODE and PDE are not solvable by analytical methods. In such situation, numerical methods help us to solve. In this paper students are exposed to various numerical methods to solve different kinds of problem in different areas and will be enriched with computational skills.

UNIT I

Solution of Nonlinear Equations- Newton's method- Convergence of Newton's method – Bairstow Method for quadratic factors. Numerical Differentiation and Integration: Derivatives from difference tables – Higher order derivatives – Divided difference, Central – Difference formulas – Romberg integration – Simpson's rules. 18hrs

UNIT II

Solution of System of Equations - The Elimination method - **Gauss and Gauss Jordan methods*** – Matrix inversion Gauss – Jordan method – Methods of iteration – Jacobi and Gauss Seidal iteration – Relaxation method. 18hrs

UNIT III

Solution of Ordinary Differential Equations - Taylor series method – Euler and Modified Euler methods - Runge – Kutta methods – Multistep methods – Milne's method – Adams Moulton method. 18hrs

PMA 8

UNIT IV

Boundary Value Problems and Characteristic Value Problems - Solution through a set of equations – Derivative boundary conditions – Characteristic value problems – **Eigen values of a matrix*** by iteration – The power method. 18hrs

UNIT V

Numerical Solution of Partial Differential Equations - Solutions of Elliptic, Parabolic and Hyperbolic partial differential equations : Representation as a difference equation – Laplace's equation on a rectangular region – Iterative methods for Laplace equation – The Poisson equation – Derivative Boundary conditions – Solving the equation for time – dependent heat flow (i) The Explicit method (ii) The Crank Nicolson method – Solving the wave equation by finite differences. 18hrs

Total Hours = 105

Core Paper 5 COMPLEX ANALYSIS

Objectives:

A special property of complex numbers is that the basic mathematical operations involving them do not take one outside the domain of complex numbers. Also to enable the learners about

- i) Complex integration, residues power series, cauchy's fundamental theorem, cauchy's integral formulae, harmonic functions, partial fractions and the Riemann mapping theorem.
- ii) To solve problems in these areas.
- iii) To develop skills to participate in mathematical competitions and competitive examinations.

UNIT I

Fundamental Theorems : Line Integrals – **Rectifiable Arcs - Line Integrals as Functions of Arcs*** – Cauchy's Theorem for a Rectangle – Cauchy's Theorem in a Disk - Cauchy's Integral formula: The index of a point with respect to a closed curve – The Integral formula – Higher derivatives. 22hrs

UNIT II

Local Properties of Analytic Functions : Removable Singularities - Taylor's theorem – Zeros and poles – The Local Mapping – The Maximum principle . 20hrs

UNIT III

The Calculus of Residues : The Residue theorem – The Argument Principle – Evaluation of Definite Integrals - Harmonic functions: Definitions and Basic Properties – The Mean - value Property – Poisson's formula. 21hrs

PMA 11

UNIT IV

Power Series Expansions: Weierstrass's Theorem – The Taylor Series – The Laurent Series -
Partial fractions and Factorization: Partial Fractions – Infinite Products. 21hrs

UNIT V

Canonical Products – The Riemann Mapping theorem : Statement and Proof - The Schwarz –
Christoffel Formula – A closer look at harmonic functions: Functions with Mean -value Property -
Harnack's Principle. 21hrs

Total Hours = 90

Core Paper 6 PARTIAL DIFFERENTIAL EQUATIONS

Objectives:

The paper prescribed, provides all important fundamental concepts, underlying principles and a wide range of applications. Illustrations are provided wherever necessary.

Unit I

Mathematical models: The classical equations – The vibrating string - The vibrating membrane – waves in elastic medium – Conduction of Heat in solids.

Classification of 2nd order equations: 2nd order equations in two independent variables – Canonical forms – Equations with constant coefficients – General solutions. 18hrs

Unit II

The Cauchy Problem: The Cauchy problem – homogenous wave equation – Initial boundary value problems – **Non homogenous boundary conditions*** – Finite string with fixed ends – Non homogenous wave equation . 18hrs

Unit III

Method of separation of variables : Separation of variables – The vibrating string problem – Existence and uniqueness of solution of the vibrating string problem – The heat conduction problem – Existence and uniqueness of solution of heat conduction problem – The Laplace and beam equations. 18hrs

Unit IV

Boundary value problems : Boundary value problems – Maximum and minimum principles – Uniqueness and continuity theorems – Dirichlet problem for a circle – Neumann problem for a circle – Dirichlet problem for a rectangle – Neumann problem for a rectangle. 18hrs

PMA 14

Unit V

Green's function : The Delta function – Green's function – Method of Green's function – Dirichlet problem for the Laplace operator – **Dirichlet problem for the Helmholtz operator*** – Method of images. 18hrs

Core Paper 7 MECHANICS

Objectives:

This subject attracts the interest of the mathematicians, since the solutions of the mechanical problem are derived using mathematical procedures. The syllabus is a compact package of intellectually satisfying areas of dynamical theory. By learning the subject, students acquire knowledge in solving mechanical problems.

UNIT I

Introductory concepts: Mechanical Systems –Generalized Co-ordinates – Constraints -Virtual work. 18hrs

UNIT II

Lagrange's Equations: Derivation of LaGrange's Equations –**Examples*** –Integrals of motion. 18hrs

UNIT III

Hamilton's Equations: Hamilton's Principle – Hamilton's equations. 18hrs

UNIT IV

Hamilton –Jacobi Theory: Hamilton's Principle function –Hamilton –Jacobi equation –**Separability***. 18hrs

UNIT V

Canonical Transformations: Differential forms and Generating functions –Lagrange and Poisson Brackets. 18hrs

Total Hours = 75

Core Paper 8 PROGRAMMING IN C – THEORY

Objectives:

Programming in C finds a wide range of applications in the development of software. A course content Provides all the fundamental concepts of the C language.

UNIT I

Overview of C :

Sample Programs*, Basic Structure of C Programs, Programming Style,

Constants, Variables and Data Types:

Introduction, **Character Set , C Tokens, Keywords and Identifiers***, Constants, Variables, Data Types, Declaration of Variables, , Declaration of Storage Class, Assigning Values to Variables, Defining Symbolic Constants.

Operators and Expressions:

Introduction, Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators ,Increment and Decrement Operators, Conditional Operator, Bitwise Operators, Special Operators, Arithmetic Expressions, Evaluation of Expressions, Precedence of Arithmetic Operators, , Some Computational Problems, Type Conversions in Expressions, Operator Precedence and Associativity, Mathematical Functions. 15hrs

UNIT II

Managing Input and Output Operations:

Introduction, Reading a character, Writing a Character, Formatted Input, Formatted Output,

Decision Making and Branching:

Introduction, Decision Making with IF Statement, Simple IF Statement, The IF-ELSE Statement, Nesting of IF... ELSE Statements, The ELSE IF Ladder, The Switch Statement, The?: Operator, The GOTO Statement. 15hrs

UNIT III

Decision Making and Looping:

Introduction, The WHILE Statement, The DO Statement, The FOR Statement, Jumps in LOOPS .

Arrays: Introduction, One-dimensional Arrays, Declaration of One- dimensional Arrays, Initialization of One- dimensional Arrays, Two-dimensional Arrays – Initializing Two-dimensional Arrays – Multi - dimensional Arrays. 15hrs

UNIT IV

Character Arrays and Strings :

Introduction – Declaring and Initializing String Variables ,Reading Strings from Terminal , Writing Strings to Screen , Arithmetic Operations on Characters , Putting Strings Together , Comparison of Two Strings, String - handling Functions, Table of Strings.

User defined functions:

Introduction , Need for User - defined Functions, A Multi - function Program, Elements of User-defined Functions , Definition of Functions, Return Values and their Types, Function Calls, Functions Declaration, Category of Functions , No Arguments and no Return Values , Arguments but no Return Values, Arguments with Return Values. 15hrs

UNIT V

Structures and Unions:

Introduction, Defining a Structure, Declaring Structure Variables, Accessing Structure Members, Structure Initialization, Copying and Comparing Structure Variables, Operations on Individual Members, Arrays of Structures, Arrays within Structures, Structures within Structures, Structures and Functions, Unions, Size of Structures.

PMA 19

Pointers:

Introduction, Understanding Pointers, Accessing the Address of a Variable, Declaring Pointer Variables, Initialization of Pointers Variables, Accessing a Variable through its Pointer, Chain of Pointers, Pointer Expressions. 15hrs

Text Book

E.Balagurusamy, Programming in ANSI C, Fifth Edition, 2010, Tata McGraw Hill Education Private Limited, New Delhi 110008.

Unit I	sections	1.3, 1.9, 2.1 to 2.11, 3.1 to 3.16
Unit II	sections	4.1 to 4.5, 5.1 to 5.9
Unit III	sections	6.1 to 6.5, 7.1 to 7.7
Unit IV	sections	8.1 to 8.9, 9.1 to 9.12
Unit V	sections	10.1 to 10.13, 11.1 to 11.8

2014 – 2015 onwards
Total Credit = 1

13PMA2CL
Total Hours = 30

Core Practical 1 PROGRAMMING IN C - PRACTICAL

Objectives:

To get practical experience of the programs in Numerical Methods.

List of Practicals

1. Program to find the Numerical Solution of Algebraic and Transcendental Equations by
 - i) Bisection Method
 - ii) Regular Falsi Method
 - iii) Newton - Raphson Method6hrs
2. Program to find
 - i) Multiplication of two Matrices
 - ii) Determinant of a Matrix
 - iii) Inverse of a matrix by Gauss Jordan method
 - iv) Largest Eigen value and Eigen vector by power method8hrs
3. Program to solve an ODE by
 - i) Euler's Method
 - ii) Fourth order Runge - Kutta Method4hrs
4. Program to find the value of an integral by
 - i) Trapezoidal rule
 - ii) Simpson's 1/3 rule
 - iii) Simpson's 3/8 rule6hrs
5. Program to solve the simultaneous equations by
 - i) Gauss Elimination Method
 - ii) Gauss Seidel Method6hrs

Total Hours = 105

Core Paper 9 TOPOLOGY

Objectives:

To know about the topological spaces, metric topology, properties like connectedness, Hausdorff etc in the topological spaces.

UNIT I

Topological Spaces – **Basis for a topology*** – The order topology – The product topology on $X \times Y$ – Closed sets and Limit Points. 18hrs

UNIT II

Continuous functions - The product topology – The metric topology. 18hrs

UNIT III

Connected spaces* – Connected subspaces of the real line – Components and Local Connectedness. 24hrs

UNIT IV

Compact Spaces – Compact subspaces of the real line - Limit Point Compactness- Local compactness. 24hrs

UNIT V

The countability axioms – The separation axioms –The Urysohn Lemma – Urysohn Metrization Theorem. 21hrs

PMA 23

Text Book

James R.Munkers, Topology, Second Edition , Prentice Hall of India Pvt. Ltd., New Delhi, 2003.

Unit I	Chapter 2	Sections 12 to 15, 17
Unit II	Chapter 2	Sections 18, 19, 20
Unit III	Chapter 3	Sections 23,24,25
Unit IV	Chapter 3	Sections 26,27,28,29
Unit V	Chapter 4	Sections 30,31,33

Core Paper 10 CONTROL THEORY

Objectives:

To enable the learners

- (i) To understand the basics of observability, controllability, stability, stabilizability, optimal control of linear and nonlinear system.
- (ii) To develop skills try to solve problems,
- (iii) To acquire knowledge to review research papers.

Unit I

Motivation – **Basic Results of Differential Equations*** – Fixed point Methods –
Observability of Linear systems – Non linear systems. 21 hrs

Unit II

Controllability of Linear systems – Non linear systems. 21 hrs

Unit III

Stability of Linear systems – Perturbed Linear systems – Non linear systems. 21 hrs

Unit IV

Stabilizability – **Stabilization Via linear feed back control*** – The controllable
subspace–Stabilization with Restricted Feed back. 21 hrs

Unit V

Optional Control – Linear Time varying systems – Time Invariant systems – Non linear systems.
21 hrs

Total Hours = 105

Core Paper 11 MATHEMATICAL STATISTICS

Objectives:

The study of statistics is a fascinating one; and statistics today is an indispensable part of every human activity, economic, social and political. Statistics and mathematics are very intimately related subjects. Recent advancement in statistical techniques are the outcome of wide applications of advanced mathematics. Increasing role of mathematics in statistical analysis has resulted in a new branch of statistics called mathematical statistics. This subject is widely employed as a tool and highly valuable one in the analysis of problems in natural, physical and social sciences.

UNIT I

Random Events: Preliminary remarks – **random events and operations performed on them*** – the system of axioms of the theory of probability – conditional probability – Bayes theorem – Independent Events – Random variables : the concept of a random variable – the distribution function – Random variables of the discrete type and the continuous type – functions of random variables – Multidimensional random variables – Marginal distributions – conditional distributions – Independent random variables – Parameters of the distribution of a random variable - Expected values – Moments – The Chebyshev inequality – Absolute moments. 21hrs

UNIT II

Characteristic functions : **Properties of characteristic functions*** – The characteristic function and moments – Semi - Invariants – The characteristic function of the sum of independent random variables – Determination of the distribution function by the characteristic function – The characteristic function of multidimensional random vectors – Probability generating functions – Some probability distributions : One point and two point distributions – The Bernoulli scheme: The binomial distribution – The Poisson distribution. 21hrs

UNIT III

Some probability distributions – The uniform distribution – The normal distribution – the gamma distribution – The beta distribution – The Cauchy and Laplace distributions – Limit theorems : Preliminary remarks – Stochastic convergence – Bernoulli's law of large numbers – The convergence of a sequence of distribution functions – The Levy - Cramer theorem – The de Moivre Laplace theorem – The Lindeberg – Levy theorem. 21hrs

UNIT IV

The theory of Estimation: Preliminary notions – Consistent estimates – Unbiased estimates – The sufficiency of an estimate – The efficiency of an estimate – Asymptotically most efficient estimates – Methods of finding estimates (Method of moments and the method of maximum likelihood estimates only). 21hrs

UNIT V

Sample moments and their functions : The notion of a sample – The notion of a statistic – The distribution of the arithmetic mean of independent normally distributed random variables – The χ^2 distribution – Student's t- Distribution – Fisher's Z-distribution – Significance tests: The concept of a statistical test – Parametric tests for small samples – The χ^2 test – Independence tests by contingency tables. 21hrs

Text Book

Marek Fisz, Probability theory and Mathematical Statistics, John Wiley & Sons, Inc, USA, 1980.

Unit I	Chapter 1	1.1 to 1.3, 1.5 to 1.7
	Chapter 2	2.1 to 2.8
	Chapter 3	3.1 to 3.4
Unit II	Chapter 4	4.1 to 4.7
	Chapter 5	5.1, 5.2 and 5.5
Unit III	Chapter 5	5.6 to 5.10
	Chapter 6	6.1 to 6.4, 6.6 to 6.8
Unit IV	Chapter 13	13.1 to 13.7
Unit V	Chapter 9	9.1 to 9.4, 9.6 and 9.7
	Chapter 12	12.1, 12.2, 12.4 and 12.7

SEMESTER IV

2014 – 2015 onwards
Total Credits = 5

14PMA412
Total Hours = 95

Core Paper 12 MATHEMATICAL METHODS

Objectives:

This paper is a blend of powerful methodological techniques which will be very much useful and also provide good foundations for the area of applied mathematics.

UNIT I

Fourier Transforms: **Fourier sine and cosine transforms*** – Fourier transforms of derivatives – The Calculation of the Fourier transforms of some simple functions – The convolution integral – Parseval's theorem for cosine and sine transforms – the solution of PDEs by means of Fourier transforms – Laplace's equation in a half plane, infinite strip, semi infinite strip – Solutions of the Diffusion equation - the linear diffusion equation on a semi - infinite line – the two- dimensional diffusion equation.

21hrs

UNIT II

Introduction: Integral equations with separable kernels – Reduction to system of algebraic equations, Fredholm alternative – an approximate method, Fredholm integral equations of the first kind, method of successive approximations – Iterative scheme, volterra integral equation, some results about the resolvent kernel, classical Fredholm theory – Fredholm's method of solution – Fredholm's first, second, third theorems.

21hrs

UNIT III

Application to ordinary differential equation – Initial value problem – boundary value problem – singular integral equation – Abel integral equation.

16hrs

UNIT IV

Calculus of Variations- Variation and its properties – Euler’s equation – **functionals of the form**

$$\int_{x_0}^{x_1} F(x, y_1, y_2, \dots, y_n, y'_1, y'_2, \dots, y'_n) dx^* - \text{functional dependent on higher order derivatives} - \text{functionals}$$

dependent on the functions of several independent variables – variational problems in parametric form – some applications. 19hrs

UNIT V

Direct Methods – Euler’s finite difference method – The Ritz method – Kantorovich’s method. 18hrs

Total Credits = 5

12PMA413
Total Hours = 105

Core Paper 13 FUNCTIONAL ANALYSIS

OBJECTIVES:

To enable the learners to understand the basics of

- (i) Banach spaces, Hahn Banach theorem, open mapping theorem
- (ii) Hilbert spaces, orthonormal sets,
- (iii) The adjoint, unitary, normal operators
- (iv) Matrices, determinants, the spectral theorem
- (iv) The Banach algebra, regular elements, singular element, topological divisors of zero, spectrum, spectral radius and also to review research papers.

UNIT I

Banach spaces – The definition and some examples – Continuous linear transformations – The Hahn-Banach theorem – The natural imbedding of N in N^{**} - The open mapping theorem. 21hrs

UNIT II

The conjugate of an operator – Hilbert spaces – **The definition and some simple properties*** – Orthogonal complements – Orthonormal sets. 21hrs

UNIT III

The conjugate space H^* - The adjoint of an operator - self –adjoint operators – Normal and unitary operators – Projections. 21hrs

UNIT IV

Matrices* – Determinants and the spectrum of an operator – The spectral theorem. 21hrs

UNIT V

The definition and some examples of Banach algebras – Regular and singular elements – Topological divisors of zero – The spectrum – The formula for the spectral radius. 21hrs

SEMESTER IV

2014 – 2015 onwards
Total Credits = 3

12PMA414
Total Hours = 75

Core Paper 14 OBJECT ORIENTED PROGRAMMING WITH C++ - THEORY

Objectives:

To enable the students to learn about the basic concepts of OOP, class structure, operators, functions in C++ and operators Overloading and Type Conversions.

UNIT I Principles of Object- Oriented Programming

Software crisis – Software evolution – A look at procedure-oriented programming – Object oriented programming paradigm – Basic concept of Object -oriented programming – Benefits of OOP – Object Oriented Languages – **Applications of OOP ***. 15hrs

UNIT II Tokens, Expressions and Control Structures

Introduction – **Tokens – Keywords*** – Identifiers and constants – Basic data types – User Defined data types – Derived data types – Symbolic constants – Type compatibility – Declaration of variables – Dynamic initialization of variables – Reference variables – Operators in C++ - Scope resolution operator – Member Dereferencing operators - Memory management operators – Manipulators – Type cast operator – Expressions and their Types – Special assignment expressions – Implicit conversions – Operator overloading – Operator precedence – Control structures. 15hrs

UNIT III Functions in C++

Introduction – The main function – Function prototyping – Call by reference – Return by reference- Inline functions – Default arguments – Constant arguments – Function overloading – Friend and virtual functions – Math Library functions. **Managing Console I/O operations** Introduction – C++ streams - C++ stream classes – Unformatted I/O operations – Formatted Console I/O operations – Managing Output with Manipulators. 15hrs

UNIT IV Classes and Objects

Introduction – C structures revisited – Specifying a class – Defining member functions – A C++ program with class – Making an outside function inline – Nesting of member functions – Private member functions – Arrays within a class – Memory allocation for objects – Static data members – Static member functions – Arrays of objects – Objects as function arguments – Friendly functions – Returning objects – Constant member functions.

Constructors and Destructors

Introduction – Constructors – Parameterized Constructors – Multiple constructors in a class – Constructors with default arguments – Dynamic initializations of objects – Copy constructor – Constructing two- dimensional arrays – Constant objects – Destructors. 15hrs

UNIT V Operators Overloading and Type Conversions

Introductions – Defining operator overloading – Overloading unary operators – Overloading Binary operators – Overloading Binary operators using friends – Manipulation of strings using operators – Rules of overloading operators. **Inheritance: Extending Classes** Introduction – Defining Derived Classes – Single inheritance – Making a Private member inheritable – Multilevel inheritance – Multiple inheritance – Hierarchical inheritance – Hybrid inheritance – Virtual Base Classes – Abstract Classes – Constructors in Derived Classes – Member Classes – Nesting of Classes. 15hrs

PMA 37
SEMESTER IV

2014 – 2015 onwards
Total Credits = 2

12PMA4CM
Total Hours = 30

Core Practical 2 OBJECT ORIENTED PROGRAMMING WITH
C++ - PRACTICAL

Objectives:

To get practical experience of the object oriented program.

LIST OF PRACTICALS

OBJECT AND CLASSES

1. Create a class ARITH which consists of a FLOAT and an INTEGER variable. Write member functions ADD (), SUB (), MUL (), DIV (), MOD () to perform addition, subtraction , multiplication, division and modulus respectively. Write member functions to get and display values.
2. Create a class metre with member functions take () and show () to convert metres into kilometres and centimetres and show the results. 6hrs

CONSTRUCTORS AND DESTRUCTORS

3. Create a class complex with float variables. Add two complex values using overloaded constructors. 4hrs

OPERATOR OVERLOADING

4. Create a class MAT has a 2 D matrix and R& C represent the rows and columns of the matrix. Overload the operators + , - , * to add , subtract and multiply two matrices. Write member functions to get and display MAT object values.
5. Create a class STRING. Write member functions to initialize, get and display strings. Overload the operator + to concatenate two strings , = to compare 2 strings and a member functions to find the length of the string. 8hrs

INHERITANCE

6. Create a class which consists of EMPLOYEE detail like eno , ename, dept, basic salary, grade. Write member functions to get and display them. Derive the class PAY from the above class and write a member function to calculate da, hra, pf, depending on the grade and display the Payslip in a neat format using console I/ O.
7. **Create a class SHAPE which consists of two VIRTUAL FUNCTIONS Cal _ Area () and Cal _ Peri to calculate Area and perimeter of various figures. Derive three classes SQUARE, RECTANGLE and TRIANGLE from the class SHAPE and calculate Area and perimeter of each class separately and display the results*.**
8. Create two classes which consists of two private variables, one integer and one float variable in each class. Write member functions to get and display them. Write a FRIEND function common to arguments and the integer and float values of both the objects separately and display the results. 8hrs

CONSOLE I / O

9. Write a user defined function USERFUN () which has the formatting commands like setw (), showpoint , showpos, precision () . Write a program which prints a multiplication table and uses USERFUN () for formatting.
10. **Write a program to read the name, number, meter reading, consumed units and print out the same and the total bill amount* .** 4 hrs

12PMA0D1

ALC 1 DISCRETE MATHEMATICS AND AUTOMATA THEORY

Objectives:

To enable the students to learn about the interesting branches of mathematics. On successful completion of this papers students should gain knowledge about the Logic, Theory of inference, Automata theory and Boolean Algebra.

UNIT I

Logic – introduction* – T F – statements – Connectives - atomic and compound statements – well formed formulae – Truth Table of a formula – Tautology

UNIT II

Tautological implications and equivalence of formulae – Replacement process – Functionally complete sets of connectives and duality law - Normal forms – Principal normal forms .

UNIT III

Theory of inference – indirect method of proof - open statements - Quantifiers

UNIT IV

Boolean algebra – Boolean Polynomials – Karnaugh map (K – map for 5 variables and 6 variables are not included) Switching circuits (simple circuits)

UNIT V

Theory of Automata – **definition – description*** – transition systems – properties – acceptability of a string by a finite automaton – Non deterministic finite state machines - the equivalence of DFA and NDFA - Mealy and Moore models

12PMA0D3

ALC 3 INTERNET AND JAVA PROGRAMMING

Objectives:

To enable the students to acquire knowledge about Java, Packages, Applet Programming and Graphics Programming.

UNIT I

Introduction to internet – Design concepts – Introduction to internet – Resources of Internet – Hardware requirements – Software requirements of internet – internet Service Providers – Internet Addressing. Introduction to web – Using the web – URL schemes – Host names and port numbers – **Using the browser – Hypertext and HTML ***.

UNIT II

Java history - Java features – Java Differs from C and C++ - Java and internet – Java Environment – **Java program structure – Java tokens*** – Java statements – Implementing java program – Java virtual machine – command line arguments – constant s- variables – data types – operator and expressions – Decision making and looping.

UNIT III

Classes – Defining a class – Adding variables – Adding methods – creating objects – Accessing class members – constructors – methods overloading – static numbers – nesting of methods – inheritance – overloading methods – final variables and methods – final class – finalizer methods -abstract methods and class – visibility control – arrays – creating an array – Two dimensional arrays – vectors – Wrapper – classes – interfaces – multiple inheritance.

UNIT IV

Packages – Java API packages – Using system packages – naming conventions – creating packages – Accessing a package – using a package – Adding a class to a package – hiding classes. Multithreaded programming – creating threads – extending a thread class – stopping and blocking a thread – life cycle of a thread – using thread methods - thread exceptions – thread priority – Synchronization – managing errors and exceptional.

UNIT V

Applet programming – Building Applet code – Applet life cycle – creating an executable applet – AWT – Graphics Programming.

Major Elective Paper

FLUID DYNAMICS

Objectives:

It is a subject of almost all fields of engineering, astrophysics, biomedicine, metrology. Basic concept of fluid dynamics are dealt with in this paper.

UNIT I

Introductory Notions – Velocity – Stream Lines and path lines – Stream tubes and Filaments – Fluid Body – Density – pressure*. Differentiation following the fluid – Equation of continuity – Boundary conditions (Kinematical and physical) - Rate of change of linear momentum – Equation of motion of an inviscid fluid. 21hrs

UNIT II

Euler's momentum theorem - conservative forces - Bernoulli's theorem in steady motion – Energy equation for inviscid fluid – circulation – Kelvin's theorem – vortex motion – Helmholtz equation. 21hrs

UNIT III

Two-dimensional motion* – two-dimensional functions – complex potential -Basic singularities – source, vortex and doublet. Circle theorem - Flow past a circular cylinder with circulation – conformal transformation – Blasius's theorem – lift force. 21hrs

UNIT IV

Viscous flow – Navier Stokes Equations – vorticity and circulation in a viscous fluid – steady flow through an arbitrary cylinder under pressure – steady couette flow between cylinders in relative motion – steady flow between parallel planes. 21hrs

UNIT V

The Laminar boundary layer in incompressible flow - Boundary layer concept – Boundary layer equations. Displacement thickness – momentum thickness – kinetic energy thickness – integral equation of boundary layer – flow parallel to semi-infinite flat plate – Blasius's equation and its solution in series. 21hrs

Total Hours = 105

Major Elective Paper

ADVANCED OPERATIONS RESEARCH

Objectives:

To enable students to acquire the knowledge of mathematics and statistics. The systematic methodology developed for Operations Research study deals with problems involving conflicting multiple objectives, policies and alternatives. The study helps to locate the best or optimal solution to a problem. The topics included in the syllabus sharpens the students brain in making quick decisions in an administrative situation. The study of Duality in linear programming, Advanced linear programming Techniques, sequencing problem, Queuing theory and non linear programming helps the students to solve problems in industries.

Unit I

Duality in Linear Programming : General Primal – Dual Pair – Formulating a Dual problem – Primal – Dual Pair in Matrix Form – Duality Theorems – Complementary slackness theorem – Duality and Simplex Method – Dual Simplex Method. 21hrs

Unit II

Integer Programming : Pure and mixed integer programming problem. Gomory's All I.P.P Method – Fractional Cut Method ; All Integer LPP –Mixed Integer LPP - Linear Programming Problem ; Advanced Techniques – Revised Simplex Method – Bounded variables. 21hrs

Unit III

Sequencing Problem : Problem of Sequencing – Basic Terms - Processing n jobs through Two Machines - Processing n jobs through k Machines – Processing 2 jobs through k Machines – Maintenance Crew Scheduling 20hrs

Unit IV

Queueing Theory : **Queueing system*** – Elements of a Queueing system – Operating Characteristics of a Queueing system - Probability Distributions in Queueing systems – Classification of Queueing models - Transient and steady states – Poission Queueing systems ; Queuing models $\{(M/M/1) : (\infty / \text{FIFO})\}$, $\{(M/M/1) : (N / \text{FIFO})\}$, $\{(M/M/C) : (\infty / \text{FIFO})\}$ and $\{(M/M/C) : (N / \text{FIFO})\}$. 22hrs

Unit V

Non Linear Programming : General Non – Linear Programming Problem – **Constrained Optimization with Equality Constraints*** – Constrained Optimization with Inequality Constraints – Kuhn–Tucker Conditions with non-negative Constraints. 21hrs

Text Book

Kanti Swarup, P.K. Gupta and Man Mohan, Operations Research, 14th Edition (2008), Sultan Chand & Sons, Educational Publishers , New Delhi.

Unit I	Chapter 5	Sections 5.1 to 5.7 and 5.9
Unit II	Chapter 7	Sections 7.1 to 7.6
	Chapter 9	Sections 9.1 , 9.2, and 9.4
Unit III	Chapter 12	Sections 12.1 to 12.7
Unit IV	Chapter 21	Sections 21.1 to 21.4, 21.6 to 21.9 (above specified Queuing Models only)
Unit V	Chapter 27	Sections 27.1, 27.3 to 27.5
	Chapter 28	Sections 28.1 and 28.3

Total Hours = 105

Major Elective Paper

FUNDAMENTALS OF ACTUARIAL MATHEMATICS

Objectives:

To enable the students to understand the concept of Insurance policies, benefits. In particular like the values of Annuity, Annuity dues, Mortality table, Life insurance premiums, Temporary assurance, Whole Life assurance and the values of policies.

UNIT I

Annuities Certain – Present Values* – Amounts – Deferred Annuities – Perpetuities Present Value of an Immediate Annuity Certain – Accumulated Value of Annuity – Relation between S_n and a_n – Present Value of a Deferred Annuity Certain – Accumulated Value of a Deferred Annuity Certain – The Accumulated Value of an Annuity due of one p.a. for a term of n years – Perpetuity – Present Value of an Immediate Perpetuity of 1 p.a – Present Value of a Perpetuity due of 1 p.a – Deferred Perpetuity with Determinment Period of m years – Mortality Table – The Probabilities of Survival and Death. 21hrs

UNIT II

Life Insurance Premiums – General Considerations* – Assurance Benefits – Pure Endowment Assurance – Endowment Assurance – Temporary Assurance or Term Assurance – Whole Life Assurance – Pure Endowment Assurance – Endowment Assurance – Double Endowment Assurance – Increasing Temporary Assurance – Increasing Whole Life Assurance – Commutation Functions D_x, C_x, M_x and R_x – Expressions for Present Values of Assurance - Benefits in Terms of Commutation Functions – Fixed Term (Marriage) Endowment – Educational Annuity Plan. 21hrs

UNIT III

Life Annuities and Temporary Annuities – Commutation Functions N_x – To Find the Present Value of an Annuity Due of Re. 1 p.a for Life – Temporary Immediate Life Annuity – Expression for $a_{x:\overline{n}|}$ - Deferred Temporary Life Annuity – Variable Life Annuity - Increasing Life Annuity – Commutation Function S_x – Increasing - Temporary Life Annuity – Tables of Life Annuity and Temporary Life Annuity - Variations in the Present Values of Annuities – Life Annuities Payable at Frequent Intervals. 21hrs

UNIT IV

Net Premiums for Assurance Plans – Natural Premiums – Level Annual Premium – Symbols for Level Annual Premium under Various Assurance Plans – Mathematical Expressions for level Annual Premium under Level Annual Premium under Various Plans for Sum Assure of Re. 1 – Net Premiums – Consequences of Charging Level Premium – Consequences of Withdrawals – Net Premiums for Annuity Plans – Immediate Annuities Deferred Annuities. 21hrs

UNIT V

Premium Conversion Tables – Single Premium Conversion Tables – Annual Premium Conversion Tables – Policy Values - Two Kinds of Policy Values – Policy Value in Symbols – Calculation of Policy Value for Unit Sum Assure – Numerical Example: Retrospective Method and Comparison with Prospective Value – Derivative of Theoretical Expressions for Policy Value, ${}_tV_x$ by the Retrospective Method and Prospective Method – Other Expressions for Policy Value – Surrender Values – Paid up Policies – Alteration of Policy Contracts. 21hrs

Text Book

Mathematical Basis of Life Assurance, Insurance Institute of India, Mumbai, June 2007.

Unit I	Sections II.1 to II.27 Sections V.1 to V.7
Unit II	Sections VIII.1 to VIII. 6 Sections IX .1 to IX.19
Unit III	Sections X.1 to X.16
Unit IV	Sections XI.1 to XI.7 Sections XII.1 to XII.4
Unit V	Sections XIII.1 to XIII.6 Sections XV.1 to XV.10

Reference

Total Hours = 105

Major Elective Paper

CRYPTOGRAPHY

Objectives:

To enable the students to acquire the knowledge about Classical Cipher Systems, Shift Registers and Public Key systems.

UNIT I

Classical Cipher Systems: Introduction – **Transposition ciphers*** – Substitution ciphers – The Haselin Machine. 21hrs

UNIT II

The information theoretical approach : The general scheme – The information measure and absolute security – The unicity distance. 21hrs

UNIT III

The Data Encryption Standard : The DES algorithm – Analysis of DES – The modes of the DES. 21hrs

UNIT IV

Shift Registers : Stream and block enciphering – The theory of Finite state machines – shift registers – Random properties of shift register sequences – The generating function. 21hrs

UNIT V

Public Key systems : Introduction – **The RSA system*** – Public Key systems based on elliptic curves. 21hrs

Total Hours = 60

Non Major Elective Paper
SYSTEMS ANALYSIS AND DESIGN

Objectives:

To enable the learners should understand the concepts of Foundations for systems development, Structuring system requirements and Designing Data bases.

UNIT-I

Foundations for systems development: The systems development environment -
Succeeding as a systems analyst – Automated tools for systems development - Initiating
and planning systems development projects. 12hrs

UNIT-II

Analysis: Determining system requirements – Traditional methods – Modern
methods – Radical methods – Internet Development: Determining system requirements –
structuring system requirements: Process modeling. 12hrs

UNIT-III

Structuring system requirements: Logic modeling - Structuring system
requirements : conceptual data modeling. 12hrs

UNIT-IV

Design: Designing databases - **Designing Forms and Reports – Designing**
Interfaces and dialogues * – Finalizing Design Specifications. 12hrs

UNIT-V

Implementation and Maintenance: System Implementation – Maintaining
Information systems.

12hrs

Text Book

Jeffrey A. Hoffer, Joey F. George, Joseph S. Valacich , Modern Systems Analysis and Design, 3rd edition, Pearson Education, 2003.

Unit I	Sections	1, 2, 4, 6
Unit II	Sections	7, 8, 9 (Process Modeling)
Unit III	Sections	9,10
Unit IV	Sections	12, 13, 14, 15
Unit V	Sections	17, 18

Total Hours = 60

Non-Major Elective Paper

VISUAL BASIC AND ORACLE

Objectives:

To enable the students should understand the concept of Visual Basic, VB control, Advanced Active X controls and Oracle.

Unit I

The fundamentals of VB – IDE – Variables – Procedures – Control flow statements – loop statements – simple programs on using procedures. 12hrs

Unit II

VB Controls – Text box – list box – combo box – scroll box – image – picture box – DIR control – **Drive control*** – Data control – file control – label command button properties – method of each control – small programs based on the above controls. 12hrs

Unit III

Advanced Active X controls – introduction to Active X – **Rich text box control*** – MS flexi grid control – common dialogue control – multiple document interface – database programming with VB using the Visual data manager – data validation -accessing fields in a record sets – Advanced data bound controls – data bound list control - data bound combo box control – data bound grid control. 12hrs

Unit IV

Windows API – Basic Concepts – accessing the WIN 32 API from VB – Windows arguments, declaring 32 bit functions and structures – what is OLE – an example of embedding and linking – Building your own Active X control. 12hrs

Unit V

ORACLE – DDL – DML – integrity and security – primary and foreign key relationship – An example of simple and compound queries – establishing connection between ORACLE and VB. 12hrs

Non Major Elective Paper

FUZZY SETS AND FUZZY LOGIC

Objectives:

To enable the students to understand the concept of fuzzy sets and fuzzy logic, which are very much useful to higher studies.

Unit I

Fuzzy sets: **Basic concepts***- α -cuts-Additional properties of α -cuts-Extension principle for Fuzzy sets.

12hrs

Unit II

Operations on Fuzzy sets: Types of operations-Fuzzy complements-t-Norms-Fuzzy Unions-Combinations of operations.

12hrs

Unit III

Fuzzy Arithmetic* - Fuzzy numbers - Arithmetic operations on intervals - Arithmetic operations on Fuzzy numbers.

12hrs

Unit IV

Fuzzy relations: Fuzzy Relation Equations - general discussion - problem partitioning - solution method - Fuzzy Relation Equations based on Sup-i compositions - Fuzzy Relation Equations based on Inf- ω_i compositions.

12hrs

Unit V

Fuzzy Logic: Classical Logic-Multi valued Logic-Fuzzy Propositions.

12hrs

Text Book

1. George J. Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic – Theory and Applications, Prentice Hall of India, New Delhi, 2008.

Unit I	Chapter 1	Sections 1.4
	Chapter 2	Sections 2.1, 2.3,
Unit II	Chapter 3	Section 3.1, 3.2, 3.4, 3.5
Unit III	Chapter 4	Sections 4.1, 4.3, 4.4
Unit IV	Chapter 5	Sections 5.1
	Chapter 6	Sections 6.1 to 6.5
Unit V	Chapter 8	Sections 8.1 to 8.3

MEASURE AND INTEGRATION

Objectives:

To enable the students to understand the concept of

- i) Lebesgue measure and Lebesgue integral,
- ii) Measurable functions, convergence theorems and The Radon – Nikodym Theorem.

Unit I

Lebesgue Measure : Introduction, Outer measure, Measurable sets and Lebesgue measure and Measurable functions. 12hrs

Unit II

The Lebesgue Integral : The Lebesgue integral of a bounded function over a set of finite measure, The integral of a non negative function, The general Lebesgue integral. 12hrs

Unit III

Differentiation and Integration : Differentiation of monotonic functions, Functions of bounded variation, Differentiation of an integral and Absolute continuity. 12hrs

PMA 64

Unit IV

Measure and Integration : Measure spaces*, Measurable functions, Integration and General convergence theorems. 12hrs

Unit V

The Radon – Nikodym Theorem: Signed measures, The Randon- Nikodym Theorem and The L^p spaces. 12hrs

Text Book

H.L. Royden , Real Analysis, 3rd Edition, Macmillan Publishing Company, New York, 2007.

Unit I	Chapter 3	(Omit Sections 4 and 6)
Unit II	Chapter 4	(Omit Sections 1 and 5)
Unit III	Chapter 5	(Omit Section 5 only)
Unit IV	Chapter 11	Sections 1,2,3 and 4.
Unit V	Chapter 11	Sections 5, 6 and 7.
